

Is 00800.vip a scam? TrustSniffer's high-risk assessment: 0/100

00800.vip

Verdict

0

OUT OF 100

CRITICAL RISK

00800.vip shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 70%.

What this site appears to be

Minimal security/redirect page that immediately directs users to 00800.vip. No contact, product, or trust signals present.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	20 flagged it VirusTotal	RISK
Google Safe Browsing	Not listed Google	CLEAR

The page as captured

<https://00800.vip/>

What 00800.vip served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2024.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a minimal redirector presenting only a “Security” message before sending visitors to the external 00800.vip destination; it provides no identifiable product, service, contact, or business information and appears designed primarily to route traffic elsewhere.

Scam/Impersonation Risk

The site presents a **critical sensitive-interaction risk**. The domain is confirmed as blacklisted by multiple external security sources, with malicious detections from several major security vendors; this is a substantive contradiction that outweighs the presence of basic transport security. The homepage’s immediate external redirect, opaque value flow, absence of a stated purpose, and two suspicious inline scripts further reduce confidence in the destination’s integrity. No brand impersonation or conflicting legal identities are established by the supplied page evidence, but the confirmed blacklist status alone requires a security-forward posture.

EVIDENCE

- External reputation telemetry records 20 malicious detections and a confirmed blacklist status from two external sources.
- The homepage contains 37 characters of visible text and automatically redirects visitors to 00800.vip.
- Browser analysis records 2 suspicious inline scripts and 2 console errors across 2 successful runs.
- Domain registration evidence: Registered 2022-03-14 (~4.43 years old); 14 archive snapshots spanning 2024–2026 (3 years tracked).

Regulatory Verification Notes

The site does not disclose an operator, corporate identity, product or service description, contact channel, license, registration number, or regulatory authority on the observed page. Identity verification therefore remains incomplete, and no regulated-entity status is established by the available evidence. The use of a privacy service is an administrative registration detail rather than, by itself, proof of misconduct; however, it does not compensate for the homepage's lack of substantive legal and business disclosures. A valid domain-validated certificate confirms encrypted transport only and should not be treated as evidence of legitimacy.

EVIDENCE

- The homepage title is "Security," with no visible legal, licensing, or business disclosure.
- The domain is registered through DYNADOT LLC; the recorded creation date is 2022-03-14T12:38:55Z and expiration date is 2028-03-14T12:38:55Z.
- The site is served through AS35251, identified as ANTI-DDOS - NetLab Global, US, with the observed network country recorded as HK.
- TLS is issued by YE2 at DV validation level and is valid to 2026-11-13T03:59:20+00:00.

What to Verify Next

Any prospective engagement should first establish the identity of the operator and the legitimacy of the final destination through an independent channel. Relevant licensing or registration should be confirmed directly with the applicable regulator rather than relying on the site itself. Credentials, payment details, wallet authorisations, downloads, and other sensitive actions should not be undertaken unless those checks produce independently corroborated results.

EVIDENCE

- The homepage provides no operator identity or independent contact route to support offline confirmation.
- The observed page contains no product, service, licensing, or regulatory information against which claims could be validated.
- The automatic transition to an external destination means the final destination must be assessed separately before any interaction.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. The available evidence does not support treating the site as a trustworthy or identity-verified service, and the confirmed external security contradictions determine the assessment.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, with multiple Cloudflare edge addresses and a potential origin candidate observed during resolution. This infrastructure may reduce direct exposure of the service and provides a mitigating technical control, but it does not establish operator legitimacy or offset the external reputation findings.

Closing Assessment

The appropriate enterprise action is to restrict activity to passive observation, block or escalate the destination for security review, and require independent identity, regulatory, and destination validation before any account, credential, payment, download, or wallet-related interaction.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE
- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat
- A large share of what the page loaded came from other domains.

Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
- The page carried inline scripts written in a style TrustSniffer treats as suspicious.

Behaviour in a sandbox rule:BEHAV_SUSPICIOUS_INLINE_SCRIPTS
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

StatusUNVERIFIED

Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of 00800.vip.

- The request stayed on 00800.vip. It was not redirected to another domain. [CLEAR](#)
- Registration is published under DYNADOT LLC. [CLEAR](#)
- DNS for this domain is served by xundns.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2028-03-14. [CLEAR](#)
- The earliest public archive of this site is from 2024-09-20. [CLEAR](#)
- It is hosted on ANTI-DDOS, from a server in HK. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about 00800.vip at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
