

Is 00808.vip a scam? TrustSniffer's high-risk assessment: 0/100

00808.vip

Verdict

0

OUT OF 100

CRITICAL RISK

00808.vip shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 70%.

What this site appears to be

Sparse page displaying 'Security' and a redirect notice to 00808.vip. No forms, no contact or legal info. Appears to function as a redirector/relay.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://00808.vip/>

What 00808.vip served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

00808.vip is a minimal landing page presenting the word “Security” and an automatic redirect to 00808.vip, with no visible product, service, or identifiable business model; its apparent function is a relay or transient staging page rather than an independently described service.

Scam/Impersonation Risk

The site presents a **critical sensitive-interaction risk**. External security assessments recorded 21 malicious detections and confirmed blacklist status, including detections by multiple established security providers. The homepage’s immediate redirection to an external destination, combined with minimal content, suspicious inline scripts, and an opaque value flow, is consistent with a relay or staging function. No conflicting legal identities or direct brand impersonation were observed, but those absences do not offset the confirmed external threat signals. The domain’s historical record does not establish that the current page is legitimate or that its operator is independently verified.

EVIDENCE

- The homepage contains approximately 37 characters of visible text and redirects visitors to 00808.vip.
- Behavioral testing recorded 2 suspicious inline scripts, 2 console errors, and a synthetic-response ratio of 66.7%.
- External security evaluation recorded 21 malicious detections and blacklist status.
- The domain was registered on 2022-03-14 and is approximately 4.43 years old; archival records contain 31 snapshots spanning 2017–2026, with 10 years tracked.

Regulatory Verification Notes

The page does not identify a legal entity, provide contact details, describe a service, or present licensing information. This is a material disclosure gap for any proposed financial, commercial, or account-based interaction, while the site's real-world operator remains unverified. The available third-party broker context contains no matching record, but that is contextual information only and does not establish licensing or regulatory standing.

EVIDENCE

- The homepage is titled "Security" and contains no visible legal, contact, or product information.
- The site does not state a license authority, registration number, or regulated business status.
- The website is served from AS35251, identified as ANTI-DDOS - NetLab Global, US, with observed infrastructure in Hong Kong.
- The transport certificate is DV-validated, issued by YE2, and valid through 2026-11-13.

What to Verify Next

Before any sensitive interaction, the final redirected destination should be assessed independently rather than trusted through this relay page. Any claimed operator should be matched to an official corporate or regulatory registry using independently sourced contact details, and the intended service, payment recipient, and applicable consumer-protection terms should be confirmed before proceeding. Account credentials, financial information, or downloaded content should not be provided through the redirect chain.

EVIDENCE

- The homepage behavior is an immediate redirect rather than a self-contained service presentation.
- Automated testing completed 2 successful runs, with an HTTP 200 success ratio of 1.0.
- No login form, hidden form, wallet provider, wallet-sensitive action, or clipboard-write activity was detected during testing.

Summary Verdict

The overall posture is critical and unsuitable for trusted sensitive interaction. Converging malicious-reputation, blacklist, redirect, content-minimality, and operator-verification concerns outweigh the limited evidence of technically functioning web service delivery.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer against direct exposure of the underlying service, but it is not evidence of legitimacy. The site also presents potential origin candidates behind the observed edge infrastructure, so the protective layer should be treated as an implementation characteristic rather than a trust signal.

EVIDENCE

- Cloudflare edge IPs observed: 104.21.44.194, 172.67.203.65, 2606:4700:3034::ac43:cb41, and 2606:4700:3035::6815:2cc2, all on AS13335.
- Infrastructure resolution identified 5 unique IPs, including 4 CDN edge addresses and 1 likely origin candidate.
- The hosting provider is ANTI-DDOS - NetLab Global, US, on AS35251.

Closing Assessment

Sensitive actions should be withheld unless the redirected service and its operator are independently validated through authoritative channels; the domain should otherwise be treated as unsuitable for credentials, financial activity, or untrusted downloads.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The page carried inline scripts written in a style TrustSniffer treats as suspicious.
Behaviour in a sandbox rule:BEHAV_SUSPICIOUS_INLINE_SCRIPTS
- A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of 00808.vip.

- The request stayed on 00808.vip. It was not redirected to another domain. CLEAR
- Registration is published under DYNADOT LLC. CLEAR
- DNS for this domain is served by xundns.com, across 2 name servers. NOTED
- The registration is paid up to 2028-03-14. CLEAR
- The earliest public archive of this site is from 2017-06-27. CLEAR
- It is hosted on ANTI-DDOS, from a server in HK. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about 00808.vip at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
