

Is 2-job.com a scam? TrustSniffer's high-risk assessment: 0/100

2-job.com

Verdict

0

OUT OF 100

CRITICAL RISK

2-job.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-18 by automated analysis. Classification confidence 70%.

What this site appears to be

Japanese-language editorial site providing articles and resources for副業 (side jobs). Contains article listings, categories, archives and social links. No login, payment, or investment interfaces detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://2-job.com/>

What 2-job.com served when TrustSniffer captured it on 2026-08-18. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 1 to 3 years (registration continuity).
- Public web-archive history exists since 2000.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a Japanese-language editorial publication for people seeking a second job, side-business opportunities, career guidance, recruitment information, and related events. Its homepage presents article listings, category and archive navigation, social-media links, and sponsored or promotional material, with an apparent monetization model based on advertising, affiliate activity, native articles, and event promotion rather than direct financial services.

Scam/Impersonation Risk

The principal risk is the convergence of confirmed external reputation warnings with a site that otherwise presents as a conventional content blog. The domain is recorded on external blacklists and has multiple malicious and suspicious detections, including a Tier-1 security-vendor detection; this is materially inconsistent with treating the site as suitable for sensitive interaction. The available page analysis found no login, payment, investment, cryptocurrency, wallet-connection, or sensitive data-collection interface, and no brand impersonation finding was confirmed. The homepage and article structure therefore reduce the observed attack surface, but

they do not neutralize the external reputation contradiction. The historical record is a positive provenance signal: it indicates continuity rather than suspicious repurposing, but that signal is insufficient to offset the blacklist status.

EVIDENCE

- The domain is recorded on an external blacklist and has 4 malicious and 1 suspicious detections across evaluated reputation checks.
- The homepage is identified as a content/blog page covering side jobs, recruitment information, introductory guides, events, and promotional opportunities; no login or payment interface was observed.
- Behavioral testing recorded 9 external XHR requests, 4 external POST requests, 11 console errors, and a maximum post-interaction DOM difference of 2,396 elements; no hidden forms, password submissions, wallet activity, or cloaking was detected.
- The current registration record shows creation on 2024-01-21 and an age of 2.57 years, with Cloudflare, Inc. as registrar; archival records contain 121 snapshots spanning 2000-05-10 through 2026-02-28, covering 27 tracked years.

Regulatory Verification Notes

The site appears to operate as an editorial and promotional media property, not as a disclosed financial or regulated service. No licensing claim, regulatory authority, or registration number is presented in the supplied site content, so the legal operating entity and any obligations associated with promoted jobs, seminars, affiliate offers, or sponsored articles remain unverified. This is a disclosure and verification gap rather than, by itself, evidence of a scam. A separate third-party broker-reputation dataset produced no match, but that contextual result does not establish licensing or legal status. The valid transport certificate and identifiable mainstream hosting infrastructure are supportive technical signals, while the confirmed blacklist remains the controlling adverse factor for sensitive use.

EVIDENCE

- The homepage title and article taxonomy identify the service as a side-job and career Web media outlet rather than a licensed financial platform.
- No license claim, licensing authority, or license number is present in the recorded business-model disclosure.
- The site is served from AS13335 (CLOUDFLARENET - Cloudflare, Inc., US).
- TLS is issued by WE1 at DV validation level and is valid to 2026-10-11T09:13:46+00:00.

What to Verify Next

Before any commercial engagement, the prospective counterparty should independently identify the publisher or operating company through the contact and legal-information pages, then confirm that entity through an authoritative corporate registry. Promoted employers, seminars, books, platforms, and affiliate offers should be validated directly with the named organizations rather than through links supplied by the site. Security teams should also obtain the exact detection rationale and affected page or resource from the relevant reputation providers before permitting any exception to access controls.

EVIDENCE

- The site exposes a contact route and links to X, note.com, Bluesky, Tumblr, Pinterest, and Mastodon, providing channels that can be checked for consistent publisher identity.
- Article listings name organizations and initiatives including Ballista's "Yoake 2.0," Kokuyo's side-job support service, and a Shizuoka Prefecture seminar; those organizations can be contacted independently to confirm the promotional relationship.
- The site has no structured metadata or canonical declaration in the captured homepage, which increases the value of independently confirming the official publisher identity.

Summary Verdict

The overall posture is **critical trust risk**, driven by confirmed external reputation contradictions despite the site's benign editorial presentation and absence of observed credential or payment interfaces. The real-world operator identity is not independently verified, and the available evidence does not support treating the domain as trustworthy for sensitive interaction.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, and all four observed addresses are Cloudflare edge infrastructure: 104.21.44.49, 172.67.195.22, 2606:4700:3032::6815:2c31, and 2606:4700:3037::ac43:c316, all associated with AS13335. The origin server was not observable in this analysis. This infrastructure provides an exposure-mitigation benefit, but it is a protective hosting characteristic rather than proof of legitimacy.

Closing Assessment

The appropriate operational posture is passive reading only; login, credential submission, financial activity, and other sensitive interactions should remain blocked unless the external reputation findings are resolved and the publisher's identity is independently confirmed.

Written analysis generated 2026-08-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	30%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of 2-job.com.

- The request stayed on 2-job.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under Cloudflare, Inc.. [CLEAR](#)
- DNS for this domain is served by cloudflare.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-01-21. [NOTED](#)
- The earliest public archive of this site is from 2000-05-10. [CLEAR](#)
- It is hosted on CLOUDFLARENET, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about 2-job.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
