

Is 2009rc.com a scam? TrustSniffer's high-risk assessment: 0/100

2009rc.com

Verdict

0

OUT OF 100

CRITICAL RISK

2009rc.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-18 by automated analysis. Classification confidence 70%.

What this site appears to be

Official-style municipal planning and land resources portal with news, announcements, permit guidance, and contact details. No signs of financial solicitations or credential-harvesting.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

https://2009rc.com/

What 2009rc.com served when TrustSniffer captured it on 2026-08-18. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2013.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website presents itself as an official-style municipal planning and land-resources portal, offering public notices, planning and land-management information, permit guidance, policy updates, and online citizen-service navigation. Its apparent purpose is informational public administration rather than commercial activity, although the homepage title displays “www.121winsb.com” while the assessed site is 2009rc.com, creating a material provenance concern.

Scam/Impersonation Risk

The site carries a **critical interaction risk** because external security intelligence recorded a confirmed blacklist status, with 15 malicious detections and one suspicious detection, including findings from Kaspersky and Sophos. This is materially inconsistent with the benign municipal presentation and takes precedence over the absence of obvious fraud mechanics on the homepage. No page-level login form, hidden sensitive form, wallet connection, or credential-harvesting behavior was observed, and no brand impersonation was identified in the page analysis; these observations do not neutralize the external threat findings. The homepage's displayed title

also does not align with the assessed domain, which further weakens confidence that the content is being served from its authoritative institutional location.

EVIDENCE

- WHOIS records show registration on 2018-07-09, with an age of 8.12 years.
- The web archive contains 10 snapshots spanning 2013–2026, covering 14 years of tracked activity.
- The homepage title identifies “www.121winsb.com,” while the assessed domain is 2009rc.com.
- External reputation telemetry records 15 malicious detections and 1 suspicious detection; Kaspersky and Sophos are among the flagged vendors.

Regulatory Verification Notes

The visible content is consistent with a public-sector information service covering municipal planning, land administration, public notices, permits, and regulatory guidance. However, the available evidence does not independently verify the real-world operator or establish that the assessed domain is an authorized channel for the institution represented by the content. No broker-reputation match was identified, but that absence is only contextual and is not a regulatory determination. The site uses domain-validated transport encryption, which confirms encrypted delivery but does not authenticate the institutional operator.

EVIDENCE

- The homepage contains navigation for public information, policy and regulations, planning management, land management, announcements, and citizen services.
- The site’s TLS certificate is issued by YR1 at DV validation level and is valid through 2026-11-02.
- The page-authority assessment places the site in a mid-level authority band, which is explanatory context only and does not establish legal status.

What to Verify Next

Before any sensitive interaction, an institution represented by the portal should confirm through an independently sourced municipal or governmental directory that 2009rc.com is an authorized domain. Security teams should also validate the domain and hosting indicators through established endpoint, DNS, and threat-intelligence controls before permitting credential, payment, document-upload, or other authenticated activity. If the site is needed for public information only, access should remain limited to non-sensitive, read-only browsing until that authorization is confirmed.

EVIDENCE

- The homepage is informational in structure and does not present a login form or sensitive submission form in the observed capture.
- Behavioral testing recorded no external form submissions, no wallet-provider activity, and no clipboard-write activity.
- The external threat detections and blacklist status require independent authorization validation before sensitive use.

Summary Verdict

The website's content resembles an established municipal information portal, but the overall posture is **critical and unsuitable for sensitive interaction** because confirmed external threat detections and blacklist evidence outweigh the benign appearance of the pages. The operator's connection to the represented institution remains unverified, so the site cannot be treated as an authenticated official channel.

Infrastructure Integrity

The site resolves directly to hosting infrastructure rather than a detected CDN or WAF edge. This provides no additional edge-layer mitigation, and the hosting posture should be treated as a technical delivery characteristic rather than evidence of legitimacy.

EVIDENCE

- The site resolves to one likely origin address, with 0 edge IPs detected and no CDN identified.
- Hosting is provided by PEG-LA - PEG TECH INC, US, on AS398823.

Closing Assessment

Sensitive actions should remain blocked unless independent institutional confirmation establishes the domain's authority and security monitoring clears the observed threat indicators; non-sensitive reference access should not be treated as evidence that authenticated or financial use is appropriate.

Written analysis generated 2026-08-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE
- The page rewrote itself after it was interacted with, so what a visitor first sees is not what they end up on.
Behaviour in a sandbox rule:BEHAV_DOM_DIFF_AFTER_INTERACTION
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of 2009rc.com.

- The request stayed on 2009rc.com. It was not redirected to another domain. CLEAR
- Registration is published under NameSilo, LLC. CLEAR
- DNS for this domain is served by dnsowl.com, across 3 name servers. NOTED
- The registration is paid up to 2027-07-09. NOTED
- The earliest public archive of this site is from 2013-05-23. CLEAR
- It is hosted on PEG-LA, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about 2009rc.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
