

# Is 2137.pl a scam? TrustSniffer's high-risk assessment: 0/100

2137.pl

## Verdict

0

OUT OF 100

CRITICAL RISK

2137.pl shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-18 by automated analysis. Classification confidence 70%.

What this site appears to be

Very small page showing the domain name '2137.pl' and an email address for support/takedown/abuse reports. No links, forms, monetization, or social presence detected.

## Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

## The page as captured

---

<https://2137.pl/>

What 2137.pl served when TrustSniffer captured it on 2026-08-18. The page may look different now.

## Key findings

---

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2010.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

## Full analysis

---

### Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

2137.pl is a minimal informational contact and takedown-notice website. It presents only the domain name and a support, takedown, and abuse-reporting contact, with no visible product, service, transaction flow, monetization, or interactive functionality.

### Scam/Impersonation Risk

The site has a **critical sensitive-interaction risk posture** because external reputation evidence records a confirmed blacklist and multiple malicious detections, including signals from Fortinet and Sophos. These findings are materially more significant than the homepage's limited and apparently non-interactive presentation; the absence of a login form, payment flow, or overt impersonation content does not resolve the external threat evidence. No identity inconsistency or brand impersonation was observed in the supplied page-level findings.

#### EVIDENCE

- External reputation assessment recorded 14 malicious detections and a confirmed blacklist across two external sources.
- The homepage is a contact/takedown notice containing only 54 characters of visible text, with no forms, links, monetization, or social presence.
- Domain registration telemetry records creation on 2020-01-04 and an age of 6.62 years; historical records show 100 snapshots spanning 2010–2026 across 17 tracked years, indicating substantial historical continuity but not validating the current operator.

### Regulatory Verification Notes

The available identity evidence is unverified. The homepage does not identify a legal entity, business registration, regulator, license, or license number, so the site's regulatory status and accountable operator cannot be established from its published content. This is a transparency and verification gap rather than, by itself, proof of fraudulent conduct; however, it is significant when considered alongside the confirmed external reputation warning. The registrar recorded for the domain is OVH SAS.

#### EVIDENCE

- The homepage identifies the domain but does not publish a corporate name, registered address, licensing authority, or registration number.
- The page is classified as an informational contact/takedown notice and exposes no commercial service or regulated offering for which authorization could be assessed.
- Domain registration data identifies OVH SAS as registrar, with an expiration date of 2027-01-04.

### What to Verify Next

Any prospective engagement should first confirm the responsible legal entity and, where relevant, licensing directly through the applicable official registry rather than relying on information presented by the site. Contact-channel legitimacy should be confirmed through an independent offline or previously trusted route, and endpoint-security or network-security alerts should be resolved before any sensitive interaction. If the domain is encountered in a broader investigation, its current content and reputation should be rechecked after remediation claims or ownership assertions are provided.

#### EVIDENCE

- The homepage provides no independent legal or regulatory reference against which an operator can be verified.
- The site has no account, payment, or other interactive workflow visible in the captured page, so any subsequent request for such access would represent a material change in observed behavior.
- Behavioral testing recorded two successful runs with no external requests, hidden forms, wallet activity, clipboard manipulation, or suspicious inline scripts; this clean execution result does not override the external reputation findings.

Summary Verdict

The overall posture is **critical risk for sensitive interaction**. The site’s limited informational presentation and stable technical behavior are insufficient to offset the confirmed external malicious detections and the inability to establish an accountable real-world operator from the available evidence.

Infrastructure Integrity

The website is protected by Cloudflare’s CDN/WAF, and all observed addresses are CDN edge infrastructure rather than an independently observable origin. This provides a mitigating layer against direct origin exposure but is not evidence that the website itself is legitimate.

EVIDENCE

- Served from AS13335, CLOUDFLARENET – Cloudflare, Inc., US.
- TLS certificate issued by WE1 with DV validation, valid to 2026-10-31T09:13:44+00:00.
- Observed edge IPs were 104.21.83.220, 172.67.182.52, 2606:4700:3033::6815:53dc, and 2606:4700:3035::ac43:b634; no origin candidate was observed.

Closing Assessment

Prospective users should restrict activity to passive viewing and should not submit credentials or financial information unless the operator, purpose, and security reputation have been independently confirmed through trusted channels.

Written analysis generated 2026-08-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.  
Registration and ownership rule:KF\_WHOIS\_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.  
Analysis engine signal:direct\_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.  
External reputation rule:EXT\_BLACKLIST\_CRITICAL

Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 30/100     |
| Identity verification confidence | 50%        |

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

### What TrustSniffer observed

First-party facts recorded during the assessment of 2137.pl.

- The request stayed on 2137.pl. It was not redirected to another domain. CLEAR
- Registration is published under OVH SAS. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-01-04. NOTED
- The earliest public archive of this site is from 2010-04-29. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

### About this assessment

A trust score summarises the evidence TrustSniffer could collect about 2137.pl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
