

Is 2268.site a scam? TrustSniffer's high-risk assessment: 0/100

2268.site

Verdict

0

OUT OF 100

CRITICAL RISK

2268.site shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-18 by automated analysis. Classification confidence 70%.

What this site appears to be

Short landing page in Chinese promoting an online gambling platform. Instructs users to contact platform customer service (QQ number provided) for deposit issues. Lacks licensing, address, or clear transactional transparency.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

What 2268.site served when TrustSniffer captured it on 2026-08-18. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2023.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a short Chinese-language landing page for an online gambling and betting platform, presenting a “top-level reputation” card and sports-entertainment offering while directing visitors with deposit problems to platform customer service through QQ; its apparent business model is to solicit player deposits and stakes.

Scam/Impersonation Risk

Contradictions were observed. The site is **blacklisted** and has multiple external malicious detections, creating a materially elevated risk for sensitive interaction. Its homepage uses a deposit-before-service model: users are directed to customer service to resolve deposit issues, while the value flow, operator, and service basis remain unclear. The thin landing page provides no independent evidence supporting its promotional reputation claim, and the use of an instant-messaging contact channel rather than a verifiable business support channel further weakens transactional assurance. The available evidence does not establish brand impersonation or a conflicting legal identity, but the confirmed blacklist status and page-level deposit indicators are sufficient to make login, credential submission, and financial activity inappropriate.

EVIDENCE

- Homepage: Chinese-language gambling landing page instructing users to contact QQ customer service regarding deposit problems.
- Homepage: Four red flags recorded—deposit before service, opaque value flow, unverifiable contact or address, and claim-evidence dissonance.
- External reputation telemetry: 13 malicious detections and 1 suspicious detection across 19 evaluated results; Kaspersky and Sophos were among the flagged vendors.
- Domain registration and archive telemetry: Registered 2022 (~4.1 years old); 16 archive snapshots spanning 2023–2026 (4 years tracked).

Regulatory Verification Notes

The site does not present a licensing authority, license number, operating address, or clear transactional disclosure on the available landing page. For a gambling service soliciting deposits, these omissions are significant regulatory verification gaps rather than proof of illegality by themselves; however, they compound the independently observed blacklist and content concerns. The operator identity remains unverified, so the site's promotional presentation should not be treated as proof of a real-world licensed entity. A valid transport certificate and mainstream hosting infrastructure confirm technical delivery controls, not regulatory authorization or business legitimacy.

EVIDENCE

- Homepage: No licensing, address, or clear transactional transparency is presented.
- Hosting telemetry: Served on AS13335 (Cloudflare, Inc., US).
- Transport-security telemetry: TLS certificate issued by WE1, validation level DV, valid to 2026-11-01T11:14:43+00:00.
- Registrar telemetry: Domain registered through GoDaddy.com, LLC; expiration date 2027-07-15T23:59:59Z.

What to Verify Next

Before any contemplated engagement, an independent check should confirm whether the operator and gambling service are authorized by the relevant jurisdictional regulator, using the regulator's own registry rather than links or contact details supplied by the site. Payment-protection terms, withdrawal conditions, dispute procedures, and the legal identity responsible for customer funds should also be obtained and validated through an offline or independently sourced channel. Given the current evidence, no credentials, deposits, or other financial information should be submitted while those checks remain unresolved.

EVIDENCE

- Homepage: The service presents a gambling-related deposit workflow but does not identify a licensing authority or license number.
- Homepage: Customer-service escalation is provided through an instant-messaging channel, requiring independent confirmation of the official support route.
- Legal and identity disclosure review: No independently verifiable operator identity or address was identified in the available site content.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. The convergence of confirmed external threat detections, blacklist status, deposit-oriented mechanics, and unverified operator identity outweighs the site's basic technical availability and transport-security controls. The site should not be treated as a trustworthy gambling or payment counterparty.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer against direct exposure of the hosting environment, and all observed addresses were Cloudflare edge servers rather than an identified origin. This infrastructure reduces some network-exposure risk but does not validate the site's operator, content, or transaction safety.

Closing Assessment

Enterprise controls should block sensitive interaction with the site and prevent deposits or credential use until independent regulatory, operator-identity, and payment-protection checks produce satisfactory results.

Written analysis generated 2026-08-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of 2268.site.

- The request stayed on 2268.site. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-15. NOTED
- The earliest public archive of this site is from 2023-04-27. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about 2268.site at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
