- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2009.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Japanese hosted-blogging service that presents tools for publishing and customizing blogs, configuring domains, migrating content from other providers, monitoring readership, receiving update notifications, and managing posts through mobile applications; its apparent business model combines hosted services with advertising, including free advertising removal for eligible nonprofit, public-sector, and educational organizations.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or adverse threat-reputation indicators were observed. The site's long operating history, extensive archival record, established global traffic footprint, and clean external security reputation converge strongly with the Livedoor Blog identity presented on the product guide. Interactive testing also found no hidden or external password forms, wallet activity, clipboard manipulation, cloaking, or suspicious inline scripts.

- Domain-registration records show that 2chblog.jp was registered in 2009 and is approximately 17.1 years old, with registration extending to 2027.
- Web archives contain 535 snapshots spanning 2009–2026, representing 18 years of tracked history, with no detected suspicious repurposing or semantic drift.
- External threat telemetry recorded 0 malicious and 0 suspicious detections, no search-browsing safety alert, no external threat-list hit, and no reported infrastructure abuse; the domain holds a global traffic rank of 56,800.
- The homepage product guide contained no login form, hidden form, sensitive-data request, crypto functionality, or detected impersonation behavior.

Regulatory Verification Notes

The reviewed service is a blogging and content-publishing platform rather than a financial, investment, brokerage, or crypto offering, so no sector-specific financial licence is indicated by its stated activities. The homepage footer provides routes to terms of use, guidelines, privacy information, help, and a site map, supporting ordinary consumer-service governance. No conflicting legal-entity names were present in the supplied page evidence, and no broker-reputation match was identified.

- The homepage describes the service as a hosted publishing platform and presents no investment, brokerage, token, yield, or payment-service claims.
- The homepage footer visibly references terms of use, platform guidelines, privacy information, help resources, and a site map.
- The site is served from AS38631 (LINE - LY Corporation, JP).

- The site's transport encryption uses a YR1-issued domain-validated TLS certificate, valid until 2026-10-18.

What to Verify Next

Routine institutional onboarding should confirm that the relevant terms and privacy provisions meet the organization's requirements for account administration, user-generated content, analytics, and data handling. Organizations intending to migrate existing publications or use a custom domain should also validate migration, domain-control, retention, and account-recovery procedures against their internal continuity requirements.

- The homepage states that migration from major third-party blogging services is supported.
- The homepage advertises custom design controls and both platform-provided and independently controlled domain configurations.
- The product guide offers real-time audience analytics and optional Google Analytics integration.
- The homepage states that posting, comment review, analytics, and reading functions are available through smartphone-compatible services and applications.

Summary Verdict

The website is legitimate, established, and trustworthy. Its identity, historical continuity, substantive service presentation, traffic footprint, and clean security reputation form a coherent body of evidence with no contradictory risk signals. Normal interaction, including account login and standard platform use, is appropriate.

Infrastructure Integrity

The site resolves directly to a single Japanese hosting address operated within identified corporate infrastructure, with no CDN or WAF layer detected and no conflicting edge endpoints. Direct origin visibility is a normal architectural characteristic here rather than an adverse trust signal; valid encrypted transport provides the principal confirmed connection safeguard.

Closing Assessment

Prospective users and institutions may proceed with normal use, applying their standard account-security, contractual-review, and data-governance controls.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about 2chblog.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
