

Is acilyapiguclendirme.com a scam? TrustSniffer's high-risk assessment: 0/100

acilyapiguclendirme.com

Verdict

0

OUT OF 100

CRITICAL RISK

acilyapiguclendirme.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Turkish local engineering and building reinforcement company site describing services (seismic performance reports, reinforcement projects and implementation), contact details (phone, address, email), FAQ and a lead/contact form.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

The page as captured

<https://www.acilyapiguclendirme.com/>

What acilyapiguclendirme.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a Turkish local engineering and construction-services site presenting building reinforcement, seismic performance analysis, project design, implementation, repair, and related structural services. Its apparent business model is to generate consultancy, project, and on-site service engagements through informational pages, references, contact details, and a lead form.

Scam/Impersonation Risk

The site's visible content presents a coherent local construction-services business and shows no on-page brand-impersonation indicators or sensitive login workflow. However, this benign presentation is outweighed by confirmed external threat detections and blacklist status, including malicious classifications from multiple external reputation sources. The available evidence therefore supports a high-risk assessment for sensitive interaction, even though it does not establish that the operator is impersonating a named brand or that the business model itself is fraudulent. The real-world operator connection is assessed as likely rather than independently verified.

EVIDENCE

- The homepage describes seismic performance analysis, structural reinforcement, FRP, reinforced-concrete and steel-construction work, with no observed login, password, wallet, or hidden sensitive form.
- External reputation telemetry records 3 malicious detections and confirmed blacklist status across 2 sources; a Tier-1 security provider is among the reporting signals.
- Domain registration telemetry records creation on 2024-01-05 and an age of 2.62 years.
- Archive telemetry records 187 snapshots spanning 2021–2026, with 6 years tracked.

Regulatory Verification Notes

The site describes a conventional engineering and building-reinforcement service business rather than a financial or investment offering. Its pages provide service descriptions, references, a physical address, telephone contact, and links to LinkedIn and YouTube, but no license claim, licensing authority, registration number, or independently verified legal-entity disclosure is supplied in the available content. This is a regulatory and transparency verification gap, not by itself proof of fraud. The absence of a broker-dataset match provides no regulatory endorsement and no adverse broker-specific finding.

EVIDENCE

- The service pages identify engineering services, building performance analysis, project contracting, structural strengthening, repair, insulation, concrete cutting, anchoring, and related construction applications.
- The available identity and contact content supplies a business address, telephone number, email contact, and social links but no stated license number or licensing authority.
- Hosting telemetry identifies AS24940, HETZNER-AS — Hetzner Online GmbH, DE.
- The site's TLS certificate is issued by YR1 at DV validation level and is valid to 2026-11-10.

What to Verify Next

Before any contract, site visit, document exchange, or payment, an independent party should confirm the operator's registered legal entity and relevant engineering or construction credentials with the applicable Turkish authority or professional registry. The stated address and telephone number should be validated through an independent offline or registry-based route, and any quotation or technical report should be matched to a verifiable named engineer or contracting entity. Contact channels should also be confirmed through an independently sourced route rather than relying solely on the website.

EVIDENCE

- The homepage contains one contact or lead-generation form and no sensitive form was observed.
- The site identifies LinkedIn and YouTube as external social destinations.
- The available business content describes service contracts, project fees, and consultancy as the apparent revenue model.
- Behavioral inspection recorded successful page loads with no wallet connection, clipboard-hijacking, password-external-form, or cloaking activity observed.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. A credible-looking local-services presentation does not offset the confirmed external threat and blacklist signals, and the available evidence does not independently verify the real-world operator identity.

Infrastructure Integrity

The website is positioned behind a CDN/WAF layer, with the observed address belonging to an edge server and no origin candidate visible in the analysis. This reduces direct origin exposure and is a mitigating infrastructure characteristic only; it does not validate the site’s legitimacy or resolve the external reputation concerns.

Closing Assessment

Restrict activity to passive review until independent identity, professional-credential, and contact-channel checks are completed; credentials, confidential documents, and payments should not be submitted through the site in its current assessed state.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, external reputation.

01 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of acilyapiguclendirme.com.

- The request stayed on acilyapiguclendirme.com. It was not redirected to another domain. CLEAR
- Registration is published under IHS Telekom, Inc. CLEAR
- DNS for this domain is served by kayweb.net, across 2 name servers. NOTED
- The registration is paid up to 2027-01-05. NOTED

- The earliest public archive of this site is from 2021-11-25. CLEAR
- It is hosted on HETZNER-AS, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about acilyapiguclendirme.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
