Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2007.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Active Body is a Greek-language online retail shop presenting dietary supplements, sports nutrition, fitness accessories, product guides, promotions, shopping-cart functionality, customer accounts, and checkout services. Its apparent business model is conventional e-commerce, generating revenue through product sales and promotional offers.

Scam/Impersonation Risk

No phishing, impersonation, conflicting legal-identity, or other contradiction signals were observed. The homepage and product-catalog content present a coherent retail model covering proteins, creatine, amino acids, vitamins, weight-loss supplements, mushroom supplements, and related products, with no investment, cryptocurrency, or other high-risk financial claims. Interaction testing did produce substantial page-structure changes, external activity, and console errors, but the same testing found no hidden forms, external password destinations, wallet activity, cloaking, or suspicious inline scripts; in the context of the site's normal commerce functions and the absence of page-level red flags, these appear to be implementation or platform behavior rather than evidence of impersonation.

EVIDENCE

- The homepage and catalog pages show product listings, prices, cart functions, account actions, and checkout, with no detected phishing or brand-impersonation indicators.
- Domain continuity dates to 2007; authoritative domain age is 18.99 years (approximately 19 years).
- Historical records contain 210 snapshots spanning 2007–2026, with 20 years tracked and no suspicious repurposing or semantic drift identified.
- Evaluated external reputation checks recorded no malicious detections, no phishing indication, and zero abuse reports.

Regulatory Verification Notes

Available evidence is consistent with an established, apparently legitimate retailer, but the real-world operator identity is not independently verified. The site's available content does not identify a licensing claim or registration number in the supplied material; for a dietary-supplement retailer, this is a transparency and consumer-compliance verification point rather than evidence of a scam. The available About, Contact, Shipping, and Data Protection navigation provides relevant locations for reviewing merchant identity, consumer terms, delivery arrangements, and data handling. No broker-related reputational match was identified, although that contextual signal is not a legal or licensing determination.

EVIDENCE

- The site's homepage navigation exposes About, Contact, Shipping, and Data Protection pages, while the supplied content does not show a licensing claim or registration number.
- The website resolves through AS24940, HETZNER-AS – Hetzner Online GmbH, DE.
- TLS is issued by YR2 at DV validation level and is valid to 2026-09-26T08:23:08+00:00.
- The site's page-authority signal is in the mid band, supporting an established web presence but not independently proving operator identity.

What to Verify Next

Before credential or payment interactions, an independent check should connect the Active Body trading name to a legal merchant entity and confirm that the relevant About and Contact details are consistent across business records or an offline contact route. The Shipping, return, and consumer-rights terms should be reviewed for clear delivery, refund, and dispute procedures, and payment should be made only through a method providing appropriate buyer protection. Product labels, ingredient information, and any applicable Greek or European consumer and supplement-compliance information should also be checked against the goods being purchased.

EVIDENCE

- The site's About and Contact pages are the primary locations for independently cross-checking the merchant identity and official communication channels.
- The site's Shipping and Data Protection pages identify the relevant locations for reviewing delivery commitments, returns-related information, and personal-data handling.
- The account and checkout paths create a need to confirm payment-protection and return arrangements before completing a transaction.

Summary Verdict

The overall posture is high trust and low risk, with the available evidence strongly consistent with an established online retailer and no observed scam or impersonation contradictions. The classification supports ordinary site interaction, subject to the remaining uncertainty that the real-world operator has not been independently verified.

Infrastructure Integrity

The site is protected by CDN/WAF infrastructure, and all observed addresses were associated with edge infrastructure rather than an identifiable origin address. This provides a meaningful defensive mitigation against direct origin exposure, but it is treated as a security-control signal rather than proof of business legitimacy.

Closing Assessment

Proceed under ordinary e-commerce safeguards, completing independent merchant-identity, return-policy, and payment-protection checks before submitting credentials or payment details.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of activebody.gr.

- The request stayed on activebody.gr. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2007-08-24. CLEAR
- It is hosted on HETZNER-AS, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [activebody.gr](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
