Key findings

- Automated classification: Not Scam.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is a corporate services platform presented as activeMind AG, offering consulting, training, and certification-related services covering data protection, information security, and strategic artificial-intelligence integration. Its apparent business model is based on professional engagements, workshops, training courses, and related advisory services rather than retail commerce or financial products.

Scam/Impersonation Risk

No contradictions were observed: the available evidence contains no phishing, impersonation, malicious-content, or confirmed blacklist finding. The homepage presents a coherent corporate-services model covering GDPR/data protection, external data-protection and information-security officers, ISO 27001, NIS2, DORA, TISAX, cyber-resilience, AI workshops, and ISO 42001. Browser testing found no login form, password-collection flow, hidden form, wallet connection, clipboard manipulation, or cloaking; external requests, posts, and page-structure changes were observed but did not form a fraud pattern. The site is therefore consistent with an apparently legitimate corporate website, while the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage identifies the business as “activeMind AG” and provides structured service navigation for data protection, information security, and AI.
- External reputation assessment recorded 0 malicious detections, 0 suspicious detections, and no phishing or impersonation finding.
- Interactive testing recorded 2 successful runs, 0 hidden forms, 0 password-external forms, 0 wallet-connection runs, and 0 cloaking classification.

Regulatory Verification Notes

The site presents an apparent corporate identity and a substantial professional-services offering, including training and certification services. The available pages do not present a regulatory license number or independently verifiable registration disclosure; for this type of consulting business, that is a transparency and engagement-verification point rather than evidence of a scam. No third-party broker-dataset match was identified, which is contextual reputational information and not a legal or licensing determination. The evidence supports an established-site interpretation, but does not independently prove the operator’s legal identity or regulatory status.

EVIDENCE

- The homepage title is “Datenschutz - Informationssicherheit - KI | activeMind AG,” with navigation to About, staff, references, careers, press, contact, and privacy pages.
- Served from AS8075, MICROSOFT-CORP-MSN-AS-BLOCK - Microsoft Corporation, US.
- TLS certificate issued by YR1, validation level DV, valid to 2026-09-16T02:44:09+00:00.
- The available broker-reputation context recorded no match.

What to Verify Next

Before a credential or payment interaction, an enterprise counterparty should independently confirm the legal entity and contracting details through an authoritative corporate registry or an independently obtained business contact. Any proposed training, certification, or consulting engagement should also be matched against a written contract, applicable terms, refund or cancellation provisions, and payment protections. Where a service is represented as regulated or formally accredited, the relevant accreditation or licensing body should be checked directly.

EVIDENCE

- The site provides dedicated About, References, Contact, Careers, and Press sections that can support ordinary commercial due diligence.
- The homepage exposes a contact/newsletter form, and the detected form analysis found no sensitive form fields.
- Identity verification status remains unverified despite the site’s coherent corporate presentation.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website and supports a high-trust, low-risk posture. The site-level conclusion is strong, but it should not be treated as independent proof of the real-world operator's identity.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, with observed traffic resolving to an edge address rather than an identifiable origin server. This reduces direct origin exposure and is a positive defensive characteristic, although protective infrastructure alone does not establish legitimacy.

Closing Assessment

Normal business browsing is proportionate to the assessment, while ordinary independent identity, contractual, and payment-protection checks should be completed before credentials or payments are submitted.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of activemind.de.

- The request stayed on activemind.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by udag.de, across 3 name servers. NOTED
- It is hosted on MICROSOFT-CORP-MSN-AS-BLOCK, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about activemind.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
