- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

ADN Radio is a Chilean online news and radio portal presenting current-affairs, political, sports, culture, technology, podcast, video, and live-streaming content. Its apparent business model is an established media operation supported primarily by advertising, sponsored content, audience registrations or subscriptions, and commercial partnerships.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents coherent editorial and broadcast content rather than an impersonation, phishing, investment, or cryptocurrency scheme, and the available technical behavior showed no credential-harvesting forms, wallet activity, cloaking, clipboard manipulation, or other abuse pattern. Some advertising-related scripts and extensive external network activity were flagged by behavioral telemetry, but these are consistent with the site's advertising, analytics, streaming, and consent-management functions and do not, in this evidence, establish malicious intent.

EVIDENCE

- The homepage is identified as “ADN Radio” and provides news categories, podcasts, videos, and live radio rather than financial or high-risk transactional services.
- The site's historical record contains 5,000 archive snapshots spanning 2008–2022, covering 15 tracked years with a maximum gap of 1 year.
- The domain was registered on 2008-01-14 and is approximately 18.59 years old.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate media website, although the real-world operating identity is not independently verified. The registration record identifies Fast Net Comunicaciones S.A. and NIC Chile, which provides an attributable registration context but does not by itself prove that the registrant and current operating entity are identical. No financial-services licensing claim or license number was identified; for a news and radio business, that is not inherently anomalous, but any separate commercial, subscription, or partnership activity should be assessed against the relevant legal entity and obligations. The cookie-consent interface provides meaningful privacy-processing disclosures, including personalized advertising, audience measurement, geolocation and device-scanning purposes, and profile sharing with advertising partners; the site's broader legal and corporate disclosure position remains a point for ordinary due diligence.

EVIDENCE

- The site's transport encryption uses a DV TLS certificate issued by YR2, valid through 2026-11-03.
- The website is served through AS20940, identified as AKAMAI-ASN1 – Akamai International B.V., NL.
- The homepage's cookie-consent interface identifies advertising, audience research, device storage, geolocation, and profile-sharing purposes and states that consent can be withdrawn through configuration or the cookie policy.

What to Verify Next

Before credential or payment interactions, an enterprise or prospective commercial counterparty should independently confirm the operating entity through an official corporate or media-industry source, review the applicable terms, privacy, subscription, and advertising disclosures, and confirm that any payment flow is protected by the expected payment provider and dispute mechanisms. Official contact channels should be validated through an independent route, particularly where a transaction, paid registration, or commercial partnership is involved.

EVIDENCE

- The homepage displays “Inicia sesión” and newsletter functions, while the captured page contained no login form or sensitive form submission.
- The site links to established social platforms including X/Twitter, Facebook, Instagram, TikTok, and YouTube, providing channels that can be checked independently for consistency.
- The homepage is a content-rich news and radio page with a stable successful load and no detected untrusted form destination.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. Identity confidence is favorable but not conclusive, so the site should be treated as legitimate in appearance without treating that appearance as proof of the current real-world operator.

Infrastructure Integrity

The site benefits from CDN/WAF protection, with observed edge addresses hosted on AS16509 by Amazon.com, Inc.; the origin server was not identified in the observed resolution. This infrastructure reduces direct exposure of the origin and is a mitigating security factor, but it is not independent proof of legitimacy.

Closing Assessment

Normal browsing and ordinary site use are proportionate to the assessed posture; before submitting credentials or making payments, ordinary independent checks of the counterparty, applicable terms, and payment protection should still be completed.

Written analysis generated 2026-08-12 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of adnradio.cl.

- The request stayed on adnradio.cl. It was not redirected to another domain. CLEAR
- Registration is published under NIC Chile. CLEAR
- DNS for this domain is served by akam.net, across 6 name servers. NOTED
- The registration is paid up to 2028-02-13. CLEAR
- The earliest public archive of this site is from 2008-03-06. CLEAR
- It is hosted on AKAMAI-ASN1, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about adnradio.cl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a

legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
