The page as captured

<https://adopslatam.com/>

What adopslatam.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2017.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This Spanish-language corporate website presents AdOps Latam as a B2B digital advertising and ad-operations agency serving media companies, agencies, and advertising networks in Latin America. It offers campaign operations, audience monetization, rich-media production, digital analytics, and pre- and post-sales support, while displaying self-reported counters of 20.5B impressions served, 5B impressions monetized, more than 5K successful campaigns, and over 10 years of experience.

Scam/Impersonation Risk

The site's visible content is consistent with a conventional corporate services business: it has no login form, no sensitive-data form, no wallet functionality, no hidden forms, and no observed suspicious browser behavior. However, these benign page-level characteristics are outweighed by confirmed external threat detections and a confirmed blacklist hit. The available evidence does not identify a conflicting legal identity, brand impersonation, or phishing mechanism on the pages themselves, but the external reputation conflict is material and warrants

treating sensitive interaction as unsafe. The site's performance counters and professional presentation should therefore not be treated as sufficient evidence of operational legitimacy.

EVIDENCE

- The homepage describes AdOps Latam's advertising-operations, monetization, rich-media, and analytics services and displays the stated campaign and impression metrics.
- The contact page contains one ordinary contact form; analysis recorded no login form, password form, hidden form, wallet connection, or external password submission.
- External reputation checks recorded 5 malicious detections and 1 suspicious detection, together with a confirmed blacklist hit.
- Domain registration records show creation on 2016-08-19 and an age of 10.01 years; historical intelligence records first seen on 2017-12-22 and last seen on 2026-05-16, with 10 years tracked.

Regulatory Verification Notes

The website presents itself as a commercial advertising-services agency rather than a regulated financial provider, and no license claim or license number is displayed in the supplied site content. That is a regulatory and corporate-disclosure verification gap, not by itself evidence of a scam, but the gap is significant because the external reputation findings already create a serious trust concern. The site's apparent connection to a real-world entity remains likely rather than independently verified; social links to Facebook, LinkedIn, and Instagram provide corroborative context but do not establish legal ownership or regulatory standing. Registration through GoDaddy.com, LLC is an administrative positive, while private registration details limit the direct evidentiary value of the registrant information.

EVIDENCE

- Domain registration identifies GoDaddy.com, LLC as registrar, with the domain created on 2016-08-19 and scheduled to expire on 2027-08-19.
- Hosting telemetry identifies AS13335, CLOUDFLARENET—Cloudflare, Inc., US.
- The transport certificate is issued by WE1 at DV validation level and is valid through 2026-11-09.
- The supplied legal and identity content does not display a license claim or license number.

What to Verify Next

Before any commercial engagement, an institution should independently confirm the agency's legal entity, physical business details, and authorized representatives through corporate registries and trusted offline contacts. Any claimed client history, campaign volumes, or industry relationships should be corroborated directly with named counterparties rather than accepted from the site's own counters. If the engagement involves regulated advertising, data processing, or payment activity, the applicable registry and contractual obligations should be checked independently, and official contact channels should be confirmed through a separate trusted route.

EVIDENCE

- The About page provides business-background and experience claims but does not, in the supplied content, establish an independently verified legal entity.
- The Services and homepage content describe commercial advertising operations and performance metrics without independent client attestations.
- The Contact page provides a direct inquiry mechanism suitable for controlled validation, but not independent proof of the operator's identity or authority.

Summary Verdict

The overall posture is **critical trust risk**. Although the site appears professionally structured and its visible business model is coherent, the confirmed external reputation contradictions prevent the website from being treated as a trustworthy destination for sensitive interactions or commercial reliance.

Infrastructure Integrity

The website is protected by Cloudflare's CDN/WAF infrastructure and resolves through edge addresses associated with AS13335; the observed origin was not exposed in the analysis. This provides a meaningful protective layer against direct origin exposure, but it is only a mitigating infrastructure characteristic and does not offset the external reputation findings.

Closing Assessment

The appropriate course is to restrict activity to passive review until independent corporate, commercial, and regulatory checks have been completed; credentials, financial information, and other sensitive transactions should not be submitted through the site at this stage.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	39%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of adopslatam.com.

- The request stayed on adopslatam.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-19. NOTED
- The earliest public archive of this site is from 2017-12-22. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about adopslatam.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
