

Is advantagetelnet.com safe? TrustSniffer's low-trust assessment: 40/100

advantagetelnet.com

Verdict

40

OUT OF 100

LOW TRUST

advantagetelnet.com is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Corporate site for Advantage Telecom (Advantage Telnet) offering Hosted VoIP, fiber and other internet services, phone systems, and wiring. Provides address, phone, and email contact details and local service area information.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What advantagetelnet.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2010.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

This is a corporate telecom-services website presented as Advantage Telnet/Advantage Telecom, offering businesses internet connectivity, hosted VoIP, phone systems, and low-voltage wiring through a service-contract, equipment, installation, and maintenance model.

Scam/Impersonation Risk

The site presents a coherent small-business telecom profile, with service descriptions, a local address, telephone contact details, customer-login language, and quote-request functionality. However, external reputation evidence identifies the domain as **blacklisted**, with corroborating malicious and suspicious detections. Runtime inspection also recorded a password form, a non-whitelisted external POST, substantial post-interaction page changes, and repeated console errors; these observations do not by themselves establish credential theft, but they materially increase the risk associated with login or other sensitive interaction. No separate identity inconsistency or direct brand-impersonation finding was observed.

EVIDENCE

- External reputation screening records the domain as blacklisted and includes malicious and suspicious detections.
- The homepage is titled “Advantage Telnet – Business Telecom Services and Solutions” and describes business telecom services, local contact information, and customer-login functionality.
- Runtime inspection recorded a password form, one non-whitelisted external POST, 932 DOM mutations, and 11 console errors.

Regulatory Verification Notes

The available site material identifies the apparent trading presentation as Advantage Telecom/Advantage Telnet but does not state a licensing authority or registration number for its telecom offerings. This is a disclosure gap requiring independent confirmation rather than proof of misconduct. The domain is registered through DNC Holdings, Inc., and its transport encryption is valid but uses domain validation only; these are administrative and technical facts, not confirmation of the operator’s legal identity. No broker-dataset match was identified, which provides no additional regulated-services conclusion.

EVIDENCE

- The homepage and service pages describe internet, hosted VoIP, phone-system, and wiring services without displaying a licensing authority or registration number.
- Domain registration lists DNC Holdings, Inc. as registrar.
- TLS certificate is issued by YR2, uses DV validation, and is valid to 2026-11-14.

What to Verify Next

Before any account, payment, or service-contract interaction, an independent party should confirm that Advantage Telecom/Advantage Telnet is the intended legal service provider, validate any telecom authorization applicable to the advertised services with the relevant authority, and confirm the contracting entity and payment beneficiary on written documentation. Official contact channels should also be confirmed through an independently obtained business record or an offline route rather than relying solely on details presented on the website.

EVIDENCE

- The homepage provides the business name, local service-area information, telephone details, and a physical address for independent confirmation.
- The site offers a “Request a quote” path and customer-login functionality, making contracting-entity and account-control checks directly relevant.
- The published service scope includes internet access, hosted VoIP, phone systems, and low-voltage wiring, each of which should be matched to the provider’s documented business authorization.

Summary Verdict

The overall posture is low trust with elevated risk for sensitive interaction. The business presentation is internally coherent, but the confirmed external blacklist finding and supporting runtime anomalies outweigh the site’s

otherwise conventional corporate appearance. Identity linkage remains likely rather than independently verified.

Infrastructure Integrity

The site resolves directly to infrastructure operated by Interserver, Inc. in the United States, on AS19318, with no CDN or WAF edge identified and a likely origin address exposed. This provides limited infrastructure-layer mitigation and does not offset the reputation concern.

Closing Assessment

The appropriate posture is to limit interaction to non-sensitive review until the provider’s legal identity, authorization, contracting arrangements, and payment details have been independently confirmed.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	39%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [advantagetelnet.com](#).

- The request stayed on [advantagetelnet.com](#). It was not redirected to another domain. CLEAR
- Registration is published under DNC Holdings, Inc. CLEAR
- DNS for this domain is served by [directnic.com](#), across 4 name servers. NOTED
- The registration is paid up to 2026-12-18. NOTED
- The earliest public archive of this site is from 2010-11-06. CLEAR
- It is hosted on IS-AS-1, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [advantagetelnet.com](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
