

Is airbnb.co.in legit? TrustSniffer's high-trust assessment: 95/100

airbnb.co.in

Verdict

95

OUT OF 100

HIGH TRUST

airbnb.co.in appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 55%.

What this site appears to be

Airbnb landing/search results page listing homes, experiences, and hotels for booking. Standard marketplace interface with listings, prices, ratings, and navigation to booking flows.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This website is an online travel marketplace presenting homes, hotels, experiences, prices, ratings, search tools, and booking navigation to visitors, with an apparent transaction-based model connecting guests and hosts while earning booking and service fees.

Scam/Impersonation Risk

No contradictory scam, phishing, malicious-content, or impersonation signals were observed. The homepage content is consistent with the Airbnb travel-marketplace offering, and the absence of hidden forms, wallet activity, cloaking, or externally submitted password forms supports a low-risk interpretation of the observed interaction surface. The site also has a long-established registration history, a strong established-site footprint, and clean results across the evaluated external reputation checks. Dynamic behavior, including substantial external requests and post-interaction page changes, is consistent with a modern booking platform and was not accompanied by an abuse pattern.

EVIDENCE

- The homepage presents homes, hotels, experiences, prices, ratings, and booking navigation in a coherent travel-marketplace interface.
- The interactive homepage recorded no hidden forms, password forms sent to external destinations, wallet activity, clipboard manipulation, or cloaking.
- The domain was registered in 2009 and is administered through MarkMonitor Inc.; registration continuity is approximately 16.77 years.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate marketplace, but the real-world operator identity is not independently verified by this assessment. The site does not make a specific license or registration-number claim in the supplied page findings; for a travel marketplace, this is a regulatory and disclosure point to confirm rather than evidence of fraud. The technical certificate and infrastructure provide supporting association signals, but neither independently proves the operator's legal identity or regulatory status.

EVIDENCE

- The site is served from AS16509, identified as AMAZON-02 - Amazon.com, Inc., US.
- TLS uses an OV certificate issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1 for Airbnb, Inc.; the certificate is valid to 2026-10-22.
- The domain registration record identifies Airbnb, Inc. as the organization and MarkMonitor Inc. as registrar.

What to Verify Next

Before credential or payment interaction, an organization should independently confirm that the booking account, merchant identity, cancellation and refund terms, and payment-protection arrangements correspond to the intended service. Any applicable travel-marketplace registration or consumer-protection disclosures should be checked against the relevant official registry, and official support channels should be confirmed through an independent route rather than relying solely on page-provided contact details.

EVIDENCE

- The homepage leads into account and booking flows, making independent confirmation of the intended merchant and payment path appropriate before completion of a transaction.
- The marketplace presentation includes listing prices and ratings, so cancellation, refund, dispute, and host-related terms should be reviewed at the point of booking.
- The supplied findings contain no specific license authority or registration number for independent regulatory matching.

Summary Verdict

The overall posture is **high trust and low risk**, with evidence consistent with an established, apparently legitimate website and no observed contradictions. The classification supports normal browsing and ordinary platform interaction, while the operator's real-world identity remains independently unverified.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, and all observed addresses were CDN edge servers rather than identifiable origin candidates. This architecture reduces direct origin exposure and is a mitigating infrastructure signal, although protective hosting alone is not proof of legitimacy.

Closing Assessment

Normal use is proportionate to the assessment, subject to ordinary independent checks of merchant identity, transaction terms, and payment protection before credentials or funds are committed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [airbnb.co.in](#).

- The request stayed on [airbnb.co.in](#). It was not redirected to another domain. [CLEAR](#)
- Registration is published under MarkMonitor Inc.. [CLEAR](#)
- DNS for this domain is served by awsdns-51.net, across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-11-07. [CLEAR](#)
- It is hosted on AMAZON-02, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [airbnb.co.in](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
