

Is airbnb.mx legit? TrustSniffer's high-trust assessment: 97/100

airbnb.mx

Verdict

97

OUT OF 100

HIGH TRUST

airbnb.mx appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

Spanish-language travel marketplace listing page showing multiple property search results with prices, ratings and navigation. Footer contains help, legal and company links. No obvious malicious forms or high-risk financial solicitations in the captured content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This website is a Spanish-language online travel marketplace presenting short-term accommodation listings with property descriptions, prices, dates, guest ratings, destination search, and navigation for hosts and travelers; its apparent business model is to connect hosts with guests and earn booking or service fees.

Scam/Impersonation Risk

No contradictions were observed. The captured homepage presents a coherent travel-marketplace experience rather than a phishing or financial-solicitation page: it shows accommodation results, prices, ratings, and standard navigation, while technical inspection found no login form, hidden sensitive form, password submission, wallet activity, or credential-harvesting destination. External reputation checks were clean, with no malicious or suspicious detections reported. The site's use of the Airbnb brand family is consistent with the page content, although the real-world operator identity remains independently unverified; this limits identity certainty without establishing impersonation.

EVIDENCE

- Homepage: Spanish accommodation listings in locations including Tallin, with displayed prices, dates, and guest ratings.
- Homepage behavior: no login form, hidden form, password-external form, wallet connection, or clipboard-hijacking activity detected.
- Registration record: created 2009-11-07, approximately 16.78 years old, with MarkMonitor as registrar and Airbnb, Inc listed in the registration record.

Regulatory Verification Notes

The site appears to operate as a consumer travel marketplace rather than a financial or otherwise visibly regulated service. The captured homepage includes help, legal, and company navigation, but the supplied material does not show a licensing authority or license number; this is a disclosure and verification point, not evidence of a scam. The certificate organization and registration record both reference Airbnb, Inc, which is supportive of apparent legitimacy, but they do not independently prove that the current website operator is the underlying real-world entity. The available evidence is therefore consistent with an established, apparently legitimate website while retaining that identity qualification.

EVIDENCE

- Homepage footer: help, legal, and company links are present.
- Registration record: registrar MarkMonitor; listed registrant Airbnb, Inc; expiration date 2027-11-06.
- Hosting telemetry: served from AS20940, AKAMAI-ASN1 - Akamai International B.V., NL.
- Transport encryption: DigiCert Global G3 TLS ECC SHA384 2020 CA1, OV validation, subject organization Airbnb, Inc, valid through 2026-12-11.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm that the intended booking, cancellation, refund, and payment-protection terms are presented through the official service flow and that the relevant merchant or contracting entity is clearly identified. Applicable consumer-protection or business-registration information should be checked through the relevant official registry where the transaction jurisdiction requires it. Contact channels should be confirmed through an independent, offline route before resolving disputes or changing account-security details.

EVIDENCE

- Homepage: the captured content is a listing/landing page and does not include a sensitive transaction form.
- Homepage content: the service is presented as a marketplace connecting hosts and guests, with booking-related pricing and ratings.
- Captured page behavior: two successful inspection runs found no credential-harvesting, wallet-drainer, cloaking, or hidden-sensitive-form indicators.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary travel-marketplace interaction. The principal qualification is that the real-world operator identity has not been independently verified, so legitimacy should be understood as evidence-consistent rather than proven.

Infrastructure Integrity

The site is protected by a CDN/WAF layer operated through Amazon.com, Inc. on AS16509; the observed addresses are CDN edge servers and no origin candidate was exposed in this analysis. This is a meaningful exposure-mitigation measure, but protective infrastructure alone is not proof of legitimacy.

EVIDENCE

- Infrastructure: hosted through Amazon.com, Inc. on AS16509.
- Network resolution: two observed edge IP addresses, 166.117.189.176 and 166.117.27.62; likely origin IP count 0.
- CDN/WAF posture: trusted CDN present and origin candidates absent from the observed resolution.

Closing Assessment

Normal browsing and ordinary service use are proportionate to the available risk posture, while independent merchant-identity, policy, and payment-protection checks should be completed before entering credentials or making a payment.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of `airbnb.mx`.

- The request stayed on `airbnb.mx`. It was not redirected to another domain. CLEAR
- Registration is published under Markmonitor. CLEAR
- DNS for this domain is served by nsone.net, across 5 name servers. NOTED
- The registration is paid up to 2027-11-06. CLEAR
- It is hosted on AKAMAI-ASN1, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [airbnb.mx](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
