Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2023.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Akil Ashraful is a digital-agency and consultancy website presenting website, mobile application, SaaS development, workflow automation, SEO, paid advertising, analytics, and subscription-based service packages, with an apparent business model based on project engagements, monthly subscriptions, and retained marketing services.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there were no phishing, impersonation, malicious-content, or confirmed identity-inconsistency findings. The homepage presents a coherent agency proposition under the Akil Ashraful name, and the observed interaction surface is limited to a project-inquiry contact form rather than login, credential-capture, wallet-connection, or payment-redirection mechanisms. Available external reputation checks recorded no malicious or suspicious detections, although coverage was not comprehensive; this limits the scope of that favorable signal rather than proving safety. The evidence therefore supports an apparently legitimate, low-risk service website, while the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage is categorized as a service/agency site and contains substantial service descriptions, case examples, testimonials, subscription information, and a project-inquiry form.
- Behavioral testing of the homepage recorded no login form, hidden form, password submission to an external destination, wallet-provider activity, clipboard manipulation, cloaking, or suspicious inline scripts.
- The registered domain was created on 2022-03-14 and is 4.44 years old; the available archive record spans 2023–2026, representing 4 years tracked.
- Available external checks recorded `gsb\_malicious: false`, `external\_blacklist: false`, zero AbuseIPDB reports, and no detected malicious or suspicious results in the evaluated results. These are favorable results within the checks performed, but they do not independently verify the operator or provide comprehensive coverage.

Regulatory Verification Notes

The website describes commercial digital-development and marketing services rather than presenting itself as a bank, broker, investment platform, or other regulated financial service. No license or registration number is claimed in the supplied site evidence; for this type of agency, that is a commercial transparency item rather than evidence of wrongdoing. The site's apparent identity is consistent with the name Akil Ashraful, but independent evidence connecting the website to a real-world operator is not available. Its multi-year registration, coherent service content, valid transport encryption, and favorable available reputation checks provide supporting legitimacy signals without proving operator identity.

EVIDENCE

- The homepage identifies services including website and SaaS development, workflow automation, AI chatbot setup, CRM integration, local SEO, Google and Meta advertising management, and conversion analytics.
- The domain was registered through PDR Ltd. d/b/a PublicDomainRegistry.com, with an expiration date of 2027-03-14.
- The site is served from AS18450, WEBNX – WebNX, Inc., US; its TLS certificate is issued by YR1, uses DV validation, and is valid to 2026-10-23.
- The available page-authority assessment places the site in a mid-range authority band, supporting an established web presence but not independently validating the operator or any commercial claim.

What to Verify Next

Before a credential or payment interaction, the prospective customer should independently confirm the contracting party, obtain a written statement of deliverables and recurring charges, review cancellation and refund terms, and ensure that payment protections are available. The claimed case examples, testimonials, performance language such as “Automate 80%, Grow Revenue 3X,” and any sector-specific service capability should be matched to references or documented contractual commitments. Official support and contact channels should also be confirmed through an independent route before sensitive information is exchanged.

EVIDENCE

- The homepage uses the call to action “Start Project” and invites visitors to submit project details through a contact form.
- The service presentation includes subscription packages, one-off project work, retained advertising, SEO, and automation services.
- The homepage includes performance-oriented marketing language and sector-specific packages for healthcare, construction, real estate, SaaS, e-commerce, and other businesses.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a favorable, low-risk posture and no observed scam or impersonation contradictions. The principal qualification is that the real-world operator identity has not been independently verified, so the trust conclusion should be understood as evidence-consistent rather than proof of identity.

Infrastructure Integrity

The site resolves directly to a WebNX-hosted infrastructure address in the United States rather than a detected CDN edge, with no CDN or WAF vendor identified. This indicates a conventional hosting arrangement but offers less intermediary protection than a major edge-security deployment; the infrastructure signal remains mitigating context, not proof of legitimacy or operator identity.

Closing Assessment

Normal browsing and project evaluation are proportionate to the observed risk posture; before entering credentials or making payments, ordinary independent checks of the contracting party, commercial terms, and payment protections should be completed.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of akilashraful.com.

- The request stayed on akilashraful.com. It was not redirected to another domain. [CLEAR](#)

- Registration is published under PDR Ltd. d/b/a PublicDomainRegistry.com. CLEAR
- DNS for this domain is served by dianadns.com, across 3 name servers. NOTED
- The registration is paid up to 2027-03-14. NOTED
- The earliest public archive of this site is from 2023-03-05. CLEAR
- It is hosted on WEBNX, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about akilashraful.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
