- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

allPost is a Brazilian B2B SaaS platform for e-commerce freight management. It presents multi-origin quotations, marketplace and carrier integrations, shipment tracking, CT-e auditing, dashboards, shipping labels, and APIs, monetized through a free first month followed by usage-based module billing.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent logistics-software business model, with specific operational capabilities including freight auctions, 80+ integrated channels, 597+ carriers, sub-100-millisecond quotations, CT-e auditing, and REST API/MCP access. It contains no phishing indicators, deceptive financial claims, brand impersonation signals, or suspicious forms; normal account login and standard use are appropriate.

- The homepage identifies allPost as a multi-origin freight platform for e-commerce and describes its logistics functions.
- The homepage provides business contact details in Maringá, Paraná, and presents a usage-based SaaS model after a free first month.
- The domain has 284 archive snapshots spanning 2019–2026, covering 8 tracked years.

Regulatory Verification Notes

The service is presented as commercial logistics software rather than a regulated financial product, and no license claim or regulated-service representation was identified. The principal remaining verification point is ordinary business transparency: procurement records should confirm the contracting entity, service terms, data-processing responsibilities, and applicable commercial documentation. External reputation checks found no malicious or suspicious detections, and no broker-related match was identified.

- Domain registration is recorded as 2021-03-01, with a WHOIS age of 5.42 years and expiration on 2031-03-01.
- The homepage describes B2B logistics software, carrier integrations, tracking, dashboards, auditing, and APIs rather than financial services.
- The site is served through AS14618, Amazon-AES / Amazon.com, Inc., US.
- TLS uses Amazon RSA 2048 M01, DV validation, and is valid through 2026-11-11.

What to Verify Next

Before onboarding, the prospective customer should confirm the legal contracting entity and obtain the applicable commercial, privacy, and data-processing terms. Independent confirmation of official sales and support channels is also appropriate for procurement records. These are routine vendor-validation steps and do not indicate a security concern.

- The homepage includes “Falar com Vendas” and contact information associated with Maringá, Paraná.
- The homepage links to API documentation and identifies REST API and MCP integration capabilities.
- The commercial model is described as a free first month followed by usage-based billing for contracted modules.

Summary Verdict

allPost presents as a legitimate, established, and trustworthy logistics technology provider with a coherent commercial purpose, sustained operating history, clean reputation indicators, and no observed contradiction signals. The available evidence supports normal interaction, including account login and standard platform use.

Infrastructure Integrity

The website is protected by AWS CDN/WAF infrastructure, with observed edge addresses on AS14618 and no origin candidates identified. This provides a meaningful mitigation against direct origin exposure and common web abuse, while remaining a protective infrastructure signal rather than proof of legitimacy.

- Hosting provider: AMAZON-AES – Amazon.com, Inc., US; ASN: AS14618.
- Observed edge IPs: 32.195.199.255 and 52.1.62.151.
- CDN/WAF protection is identified as AWS, with 2 edge IPs and 0 likely origin IPs.

Closing Assessment

Normal onboarding and use are appropriate, subject to the prospective customer’s standard vendor, contractual, privacy, and operational due diligence.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of allpost.com.br.

- The request stayed on allpost.com.br. It was not redirected to another domain. [CLEAR](#)
- DNS for this domain is served by awsdns-29.org, across 4 name servers. [NOTED](#)
- The registration is paid up to 2031-03-01. [CLEAR](#)
- The earliest public archive of this site is from 2019-02-17. [CLEAR](#)
- It is hosted on AMAZON-AES, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about allpost.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
