

Is allrepair.fr legit? TrustSniffer's high-trust assessment: 100/100

allrepair.fr

Verdict

100

OUT OF 100

HIGH TRUST

allrepair.fr appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

AllRepair - a Paris-based device repair shop offering express repairs, diagnostics, data recovery, and guarantees. Site includes service descriptions, pricing/process cues, FAQ, contact info, address, phone, email, opening hours, and blog articles.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

AllRepair is a Paris-based local device-repair website presenting express repair, diagnostics, data recovery, guarantees, customer information, and contact details for smartphones, tablets, computers, and related high-tech devices. Its apparent business model is to generate revenue through in-store repair services, parts and labour, diagnostics, and quotations.

Scam/Impersonation Risk

No contradictions were observed: there is no confirmed phishing, impersonation, blacklist, or malicious-content signal. The website's stated purpose is coherent with a physical-service business, describing repairs for iPhone, Samsung, and MacBook devices, screen and battery work, water-damage assistance, data recovery, diagnostics, guarantees, and a Paris storefront. The presence of service explanations, frequently asked questions, opening information, customer-review references, and a contact form supports an apparently genuine local-service presentation rather than a deceptive acquisition flow. The real-world operator identity remains likely rather than independently verified, so the site should be described as apparently legitimate rather than as identity-proven.

EVIDENCE

- The homepage identifies All Repair as a Paris 17 repair service and describes device repairs, free diagnostics, quotations, and guarantees.
- The homepage presents the physical address as 73 rue de Lévis, 75017 Paris, together with a telephone contact and service information.
- The site has no login form, hidden form, wallet interaction, password-external form, or detected brand-impersonation indicator.
- The domain was registered in 2016 and is approximately 9.88 years old; historical records contain 76 snapshots spanning 2017–2026, covering 10 tracked years.

Regulatory Verification Notes

The site provides legal links and business-facing contact information, but the available evidence does not establish the operator's legal identity independently or verify any regulatory registration. For a conventional device-repair shop, the principal diligence issue is therefore business-identity and consumer-protection transparency rather than evidence of financial-services misconduct. No matching third-party broker-reputation record was identified, and the available external security indicators contain no confirmed malicious or blacklist finding. The site should consequently be treated as an established, apparently legitimate service website, subject to ordinary merchant-identity, guarantee, payment, and consumer-rights checks.

EVIDENCE

- The homepage and contact materials provide the business location, telephone contact, opening information, service descriptions, and a contact form.
- The website includes links for "À propos," FAQ, customer reviews, contact information, and legal pages.
- Hosting is identified as AS8560, IONOS-AS – IONOS SE, DE; the technical evidence places the server in Germany.
- The site uses a valid DV TLS certificate issued by YR1, with validity shown through 2026-10-05.

What to Verify Next

Before a credential or payment interaction, an independent check should confirm that the trading name, storefront, and service provider correspond to the intended merchant. The applicable consumer terms should be reviewed for repair guarantees, diagnostic charges, data-recovery limitations, liability for device contents, collection arrangements, and refund or cancellation rights. Payment should use a method providing an appropriate dispute or buyer-protection process, and any support or appointment channel should be confirmed through an independent route.

EVIDENCE

- The FAQ and service pages are the relevant locations for checking repair scope, turnaround expectations, guarantees, and diagnostic conditions.
- The legal and contact pages are the relevant locations for confirming merchant details and applicable consumer terms.
- The contact form is informational and does not request sensitive credentials according to the observed page analysis.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website serving a conventional local repair business. No scam or impersonation contradiction was observed, and the overall trust posture is high, while independent confirmation of the real-world operator remains incomplete.

Infrastructure Integrity

The site is protected by CDN/WAF infrastructure, and the observed edge address is 212.227.250.165 on AS8560, operated by IONOS-AS – IONOS SE, DE; the origin server was not observable. This protective architecture is a mitigating security control that reduces direct exposure of the origin, but it is not, by itself, proof of business legitimacy.

Closing Assessment

Normal browsing and routine service enquiries are proportionate to the available evidence; before committing credentials, payment, or a high-value device, ordinary independent merchant-identity, guarantee, and payment-protection checks should be completed.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	74%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of allrepair.fr.

- The request stayed on allrepair.fr. It was not redirected to another domain. [CLEAR](#)
- Registration is published under OVH. [CLEAR](#)

- DNS for this domain is served by ovh.net, across 2 name servers. NOTED
- The registration is paid up to 2028-10-04. CLEAR
- The earliest public archive of this site is from 2017-02-03. CLEAR
- It is hosted on IONOS-AS, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about allrepair.fr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
