The page as captured

<https://alnas-hospital.com/>

What alnas-hospital.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2020.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Al Nas Hospital is presented as a nonprofit medical city providing free tertiary medical services, with information on departments, appointments, patient care, education programs, impact metrics, success stories, and donation requests for equipment, supplies, and patient cases.

Scam/Impersonation Risk

The site carries a confirmed blacklist finding and multiple malicious detections from external reputation assessments, creating a material contradiction that outweighs the otherwise healthcare-oriented presentation. The supplied page content contains no explicit phishing form, wallet-connect behavior, or stated brand-impersonation indicator, but the benign appearance does not resolve the external threat evidence. The domain's contact and donation functions therefore warrant a security-forward posture, and the site should not be treated as trustworthy for sensitive interaction. No conflicting legal-entity names were observed across the supplied content.

EVIDENCE

- External reputation assessments recorded the domain on two blacklist sources, with 3 malicious and 1 suspicious detection.
- The homepage presents a healthcare-charity identity and donation function, but this page-level appearance does not negate the confirmed external detections.
- The domain was registered on 2019-05-20 and is approximately 7.25 years old, according to the registration record.

Regulatory Verification Notes

The site presents itself as Al Nas Hospital and describes a nonprofit medical-service model, but the supplied evidence does not independently verify the real-world operator behind that identity. No license authority or registration number is claimed in the available business information, leaving a regulatory and organizational disclosure gap that requires independent confirmation rather than being treated as proof of fraud. The absence of a broker-dataset match provides no affirmative regulatory assurance. Transport security and hosting details confirm technical deployment, not healthcare authorization or institutional legitimacy.

EVIDENCE

- The homepage identifies the organization as “Al Nas Hospital” and describes it as a nonprofit medical city.
- The available business-model information records no claimed license authority, license number, or license verification.
- The domain is registered through GoDaddy.com, LLC.
- Hosted on AS13335 (CLOUDFLARENET - Cloudflare, Inc., US); TLS certificate issued by WE1, domain-validated (DV), valid to 2026-10-03.

What to Verify Next

An independent check should confirm that the hospital is listed with the relevant healthcare authority and that its nonprofit status and donation beneficiary correspond to the legal entity operating the facility. Donation instructions and payment-account ownership should be confirmed through an independently sourced institutional channel, rather than relying solely on contact details presented by the site. Credentials should not be entered, and financial or donation activity should remain deferred until those checks resolve the external reputation contradiction.

EVIDENCE

- Confirm the hospital and its operating entity through an official healthcare-regulator or government directory.
- Independently validate the beneficiary and payment destination for any proposed donation.
- Confirm official support and contact channels through an offline or independently sourced route.
- Reassess the domain’s blacklist status before permitting organizational access, credential use, or payment activity.

Summary Verdict

The available evidence supports a **critical-trust posture** with elevated risk for sensitive interaction. The site’s healthcare presentation is not sufficient to establish legitimacy or operator identity in the presence of confirmed external threat contradictions.

Infrastructure Integrity

The website is protected by Cloudflare’s CDN/WAF, and all observed addresses were Cloudflare edge infrastructure rather than a directly exposed origin. This reduces direct origin exposure but is only a mitigating technical control and does not establish that the site or its operator is legitimate.

Closing Assessment

Sensitive actions should be deferred, with no credentials or payments submitted through the site until independent institutional, regulatory, and reputation checks provide a satisfactory basis for engagement.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [alnas-hospital.com](#).

- The request stayed on [alnas-hospital.com](#). It was not redirected to another domain. CLEAR
- Registration is published under [GoDaddy.com, LLC](#). CLEAR
- DNS for this domain is served by [cloudflare.com](#), across 2 name servers. NOTED
- The registration is paid up to 2031-05-20. CLEAR
- The earliest public archive of this site is from 2020-08-12. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [alnas-hospital.com](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
