CyberPanel
Installed

What alphapicaficagency.com served when TrustSniffer captured it on 2026-09-17. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website presents a default CyberPanel installation page rather than an operational business site. Visitors see a brief installation-success message, references to a hosting control panel, and links to forums and documentation; its apparent purpose is an unfinished or incorrectly deployed hosting environment, not a functioning commercial service.

Scam/Impersonation Risk

The site has a confirmed blacklist status and multiple external security detections, creating a material risk for sensitive interaction. The homepage is only a default installation placeholder, contains no business proposition or service documentation, and does not establish a credible relationship between the domain and a real-world operator. No conflicting legal identities or explicit brand-impersonation indicators were observed, but those absences do not offset the confirmed external threat signals. The domain's recent registration and minimal deployed content further weaken its provenance. Evidence:

- The homepage displays “CyberPanel Installed” and instructs the administrator to remove the page and upload website content.
- External security evaluation recorded 17 malicious and 2 suspicious detections, with a confirmed blacklist result.
- The domain was registered in 2026 and is approximately 0.15 years old.

Regulatory Verification Notes

The site does not provide an operational legal, corporate, licensing, or regulatory disclosure on the observed page. Its real-world operator remains unverified, and the available content is insufficient to establish regulated status or accountable ownership. Registration privacy is an administrative limitation rather than proof of wrongdoing, but it leaves no independently confirmed operator identity for regulatory reliance. The observed abuse reports relate to shared hosting infrastructure and should be treated as a reputational signal concerning the hosting address, not as proof that the site operator caused those reports. Evidence:

- The homepage contains no company name, registered address, licensing statement, registration number, terms, or privacy disclosure.
- The domain is registered through NAMECHEAP INC; the recorded organization is “Privacy service provided by WITHHELD FOR PRIVACY LLC.”
- Hosted on AS51167, identified as CONTABO - Contabo GmbH, DE; the site’s transport certificate is issued by YR2 at DV validation level and is valid to 2026-11-10.
- The shared hosting address has 5 abuse reports, attributed to Contabo GmbH shared infrastructure rather than specifically to the site operator.

What to Verify Next

Before any interaction beyond passive viewing, an independent party should confirm whether the domain is intended to host a legitimate service and whether a named operator can be validated through an authoritative corporate or regulatory registry. Any proposed account, credential, download, payment, or financial workflow should remain suspended until that validation is complete. Official support and contact channels should be confirmed through an independently sourced route rather than relying solely on information presented by the site. Evidence:

- The observed homepage provides no accountable business identity against which registry records can be checked.
- The observed page contains no service terms, privacy notice, licensing details, or transaction conditions to validate.
- The site’s active content should be compared with any independently confirmed operator records before sensitive interaction.

Summary Verdict

The website has a critical trust posture and should not be treated as an established or verified service. The available evidence supports a clearly cautionary assessment for credentials, account access, downloads, payments, and other sensitive activity, while the operator’s identity remains unverified.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present and is a mitigating control for exposure at the network edge, but it does not establish legitimacy. The observed address was an edge address, and the origin server was not

observable in this analysis; consequently, the protective infrastructure cannot independently validate the underlying service.

EVIDENCE

- The site is protected by Cloudflare CDN/WAF infrastructure.
- One CDN edge address was observed, with no origin candidate identified during the infrastructure analysis.

Closing Assessment

The appropriate disposition is to avoid sensitive interaction and require independent operator and regulatory confirmation before the site is considered for enterprise or financial use.

Written analysis generated 2026-09-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Signals weighed against the site

- AbuseIPDB: 5 reports on hosting IP 169.58.169.5 (Contabo GmbH, Data Center/Web Hosting/Transit), 15% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of alphapicaficagency.com.

- The request stayed on alphapicaficagency.com. It was not redirected to another domain. CLEAR
- Registration is published under NAMECHEAP INC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-23. NOTED
- It is hosted on CONTABO, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about alphapicaficagency.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
