

Is alphaproject.us safe? TrustSniffer's low-trust assessment: 30/100

alphaproject.us

Verdict

30
OUT OF 100

LOW TRUST

alphaproject.us is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 50%.

What this site appears to be

Marketing site for 'Alpha Project', a boutique firm that connects investors to private opportunities. Provides mission copy, testimonials, contact email/phone/address and a submit contact form but lacks detailed disclosures about fees, regulatory licensing, or how investor funds are handled.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2004.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Alpha Project is a corporate investment-placement website presenting itself as a boutique business-development firm that connects accredited investors with high-growth, private and off-market opportunities. Its apparent business model is to facilitate investor introductions, capital raising, sourcing, or advisory services, although the site does not clearly explain the specific investment products or financial flows involved.

Scam/Impersonation Risk

No blacklist, phishing, malware, or brand-impersonation contradiction was observed, and the available evidence does not establish that the site is impersonating another entity. The principal concern is substantive rather than impersonation-based: the homepage promotes “rare off-market alternative investment opportunities,” “vetted opportunities,” wealth creation, and results that “outperform,” while providing limited evidence that would allow those claims to be assessed. The site also presents two suspicious inline scripts and unusual external-request behavior; these signals do not prove malicious activity, but they add uncertainty to interactions involving an investment inquiry. Identity remains unverified: the site names Adam Kripke as founder, but that on-site statement alone does not independently establish the operating entity.

EVIDENCE

- Homepage/About content: promotes private, off-market opportunities, wealth creation, “vetted opportunities,” and performance-oriented outcomes without supporting deal-level evidence.
- Homepage behavior: 2 suspicious inline scripts; 2 external XHR requests; maximum external activity ratio 89.3%; no hidden forms, wallet connection, password form, or clipboard-hijacking behavior detected.
- Domain registration record: registered 2018-09-21 (~7.92 years old).
- Archive record: 140 snapshots spanning 2004–2026 (23 years tracked).

Regulatory Verification Notes

The available pages describe investor introductions and private opportunities but do not clearly identify a regulated advisory or placement entity, disclose applicable licensing, provide a registration number, explain fees or commissions, or describe how investor funds are handled. These are material transparency gaps for a business soliciting or facilitating investment interest; they are regulatory verification issues, not proof of a scam. The external reputation signals supplied are limited but do not show a confirmed malicious or blacklist finding. The site’s transport and hosting configuration provide technical validity, but they do not validate the business, its claims, or its regulatory status.

EVIDENCE

- About/How It Works content: identifies a boutique business-development and capital-connection model but does not set out a clear product, fee schedule, licensing basis, or fund-handling process.
- Hosting telemetry: served from AS13335 (CLOUDFLARENET - Cloudflare, Inc., US).
- TLS telemetry: certificate issued by WE1, validation level DV, valid to 2026-10-18.
- External reputation observations: blacklist status false; malicious and suspicious counts both 0 where evaluated; abuse reports 0 and the infrastructure classified as a content delivery network.

What to Verify Next

Before any investment discussion progresses, an independent registry check should confirm whether the operator or any associated entity is authorized for investment advisory, placement, capital-raising, or related activity in the relevant jurisdiction. The prospective counterparty should obtain written documentation identifying the legal entity, beneficial operating parties, fee or commission arrangements, investor eligibility requirements, custody arrangements, and the precise destination of funds. Contact details and any proposed transaction documents should be validated through an independently sourced channel rather than relying solely on the website.

EVIDENCE

- About/Founder pages: provide the name Adam Kripke but do not independently establish the legal operating entity.
- Contact page: provides a contact form and contact details suitable for requesting the missing entity, fee, licensing, and fund-flow documentation.
- Site interaction testing: no sensitive form or password-submission workflow was observed, so verification can be conducted before any higher-risk interaction is attempted.

Summary Verdict

The overall posture is **low trust with sensitive-interaction risk**. The site appears to be a functioning investment-marketing presence without confirmed impersonation or active threat indicators, but its high-stakes commercial claims and limited independently verifiable business detail prevent a positive legitimacy conclusion.

Infrastructure Integrity

The website is protected by Cloudflare's CDN/WAF infrastructure, with all observed addresses belonging to Cloudflare edge servers and no origin server identified in the analysis. This reduces direct exposure of the underlying host and is a mitigating infrastructure signal only; it does not establish the legitimacy of the investment business.

Closing Assessment

Engagement should remain limited to information gathering until the operator, regulatory position, transaction mechanics, and proposed counterparties have been independently validated; high-value financial action should not proceed on the website's marketing claims alone.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, behaviour in a sandbox.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- Most of what the page loaded came from other domains rather than from this one.
- The page carried inline scripts written in a style TrustSniffer treats as suspicious.

Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH

Behaviour in a sandbox rule:BEHAV_SUSPICIOUS_INLINE_SCRIPTS

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of alphaproject.us.

- The request stayed on alphaproject.us. It was not redirected to another domain. CLEAR
- Registration is published under IONOS SE. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-09-21. NOTED
- The earliest public archive of this site is from 2004-02-06. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about alphaproject.us at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
