Full analysis

Overview

AlphaTV is a Greek commercial television broadcaster and content portal presenting live television, news, programme schedules, series, episode content, and entertainment features, with an apparent business model based on broadcast promotion, advertising, and related digital media services.

Scam/Impersonation Risk

No contradictions were observed: the available evidence contains no phishing, impersonation, blacklist, or malicious-content finding. The homepage presents a coherent broadcast-and-news service, including live programming, scheduled shows, Alpha News, series, and recent episodes, rather than a payment, investment, or credential-harvesting proposition. Behavioural review identified substantial post-interaction page changes and external network activity, but no hidden forms, password-exfiltration forms, wallet activity, clipboard interception, cloaking, or suspicious inline scripts; these observations are therefore more consistent with a dynamic media site than with an abuse pattern. The site's connection to the AlphaTV brand appears likely, but the real-world operator identity is not independently verified.

EVIDENCE

- The homepage is categorised as a broadcast/news page and contains approximately 36,842 characters of substantive programming, news, and entertainment content.
- The homepage exposes no login form, hidden sensitive form, password-external form, wallet connection, or clipboard-write activity.
- External reputation checks recorded 0 malicious and 0 suspicious results, with no Google Safe Browsing malicious finding and no blacklist hit.
- The homepage links to Facebook, TikTok, Instagram, YouTube, and X, providing an observable social-presence signal.

Regulatory Verification Notes

AlphaTV appears to operate as an informational and media service rather than a financial or otherwise regulated transactional platform. The analysed material does not establish a regulatory licence, registration number, or regulated-entity status; this is a verification boundary rather than evidence of deceptive conduct. Available content and infrastructure signals remain consistent with an established website, while the absence of an independently verified operator identity means that on-site branding should not be treated as proof of the underlying legal entity. No matching third-party broker profile was identified, and the available external reputation evidence was clean.

EVIDENCE

- The homepage identifies the service through the title “AlphaTV | Ειδήσεις, Σειρές, Εκπομπές & Live TV” and provides programme, news, series, and entertainment sections.
- The site’s transport server was identified as AS1241, FORTHNET-GR — Nova Telecommunications & Media Single Member S.A., Greece.
- The site uses a valid DV TLS certificate issued by Sectigo Public Server Authentication CA DV R36, valid to 2026-09-02T23:59:59+00:00.
- The page-authority assessment placed the site in the mid authority band; this is contextual evidence and is not treated as a regulatory determination.

What to Verify Next

Before any credential or payment interaction beyond ordinary content consumption, an organisation should independently confirm the broadcaster’s legal operator and official contact routes using a trusted offline or separately sourced channel. If a paid, subscription, or partner service is presented, its contracting entity, terms, cancellation rights, privacy information, and payment-protection arrangements should be checked independently before commitment. Any regulatory question should be directed to the relevant Greek authority or registry applicable to the specific service being offered.

EVIDENCE

- The homepage provides a “Contact” pathway within the site’s general navigation and identifies multiple official-looking social channels.
- No sensitive input forms were detected on the analysed homepage.
- The stated business model is commercial broadcasting and content distribution, with advertising and possible premium or partner features rather than an identified financial-service offering.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for its stated media purpose. No scam or impersonation contradiction was identified, although the real-world operator identity remains likely rather than independently verified.

Infrastructure Integrity

The site is protected by a CDN/WAF layer, with the observed edge infrastructure associated with AS8075, Microsoft Corporation, and an edge address of 51.144.54.180; no origin candidate was observed. This is a mitigating infrastructure control that reduces direct exposure of the origin, but it is not proof of ownership or legitimacy.

Closing Assessment

Ordinary content access is proportionate to the current assessment; before submitting credentials or making any payment, the prospective user should complete independent checks of the merchant identity, applicable terms and return or cancellation rights, and available payment protection.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	78%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of alphetv.gr.

- The request stayed on alphetv.gr. It was not redirected to another domain. CLEAR
- It is hosted on FORTHNET-GR, from a server in GR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about alphetv.gr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
