

Is alvoice.com a scam? TrustSniffer's high-risk assessment: 5/100

alvoice.com

Verdict

5

OUT OF 100

CRITICAL RISK

alvoice.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 75%.

What this site appears to be

Alvoice Solutions Limited — Nigerian-registered ICT and telecom company. The page contains company information, services (content creation, aggregation, bulk messaging), team, pricing plans, contact details and a request-a-quote call to action. License number and physical address listed; no forms or financial deposit flows detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What alvoice.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2010.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Alvoice Solutions Limited's website presents itself as a Nigerian ICT and telecommunications services company offering content creation, content aggregation, bulk messaging, value-added services, technical support, pricing plans, and request-a-quote engagement for business customers.

Scam/Impersonation Risk

The site's corporate presentation is coherent and the page-level review found no login form, sensitive submission flow, financial deposit mechanism, or obvious brand-impersonation feature. However, external threat intelligence recorded malicious and suspicious detections and a confirmed **blacklist** status from multiple sources. That external contradiction materially outweighs the site's otherwise conventional appearance. No separate conflicting legal-entity names or explicit brand-impersonation finding is present in the supplied page analysis, but the blacklist status is sufficient to make credential, payment, and other sensitive interaction inappropriate pending resolution.

EVIDENCE

- External reputation checks recorded 3 malicious and 2 suspicious detections, with the domain marked on a blacklist.
- The homepage is classified as a corporate/services page and contains no login form, hidden sensitive form, or external password-submission destination.
- Domain registration evidence records registration in 2015, with an age of approximately 11.42 years.
- Web-archive records show 533 snapshots spanning 2010–2026, with 17 years tracked.

Regulatory Verification Notes

The About content states that Alvoice Solutions Limited is registered under Nigerian law and licensed by the Nigerian Communications Commission, displaying license reference VAS/SCN/045/16-R1 and a physical address. These are on-site claims rather than independently verified regulatory findings, and the operator's real-world identity remains unverified in the available evidence. The business model itself is a conventional B2B ICT and telecom offering, with no financial solicitation or cryptocurrency activity identified; nevertheless, the confirmed external blacklist status requires the stated corporate and licensing claims to be treated as unresolved rather than accepted at face value.

EVIDENCE

- The homepage identifies "Alvoice Solutions Limited" and states that it is licensed by the Nigerian Communications Commission under license reference VAS/SCN/045/16-R1.
- The homepage presents content creation, content aggregation, bulk messaging, support, pricing, and request-a-quote services.
- The site is served from AS19318 (IS-AS-1 - Interserver, Inc, US).
- The site's TLS certificate is issued by YR2 at DV validation level and is valid to 2026-10-01.

What to Verify Next

Before any sensitive engagement, the claimed Nigerian corporate status and telecommunications authorization should be confirmed directly through the relevant official registry, using independently sourced contact details rather than relying solely on the website. The physical business details and the identities of contractual representatives should also be validated through an offline or independently obtained channel. Any prospective counterparty should require the external blacklist finding to be explained and cleared through documented security review before approving credentials, payments, data exchange, or service contracts.

EVIDENCE

- The licensing claim is displayed on the homepage and should be checked against the Nigerian Communications Commission's official records.
- The site provides corporate, team, pricing, and contact content that can be reconciled against independently sourced company information.
- The external reputation finding is a concrete technical issue requiring documented resolution before sensitive interaction.

Summary Verdict

The website has a professionally presented and apparently coherent corporate profile, but the available evidence supports a **critical trust posture** because confirmed external threat detections and blacklist status create a material contradiction. The operator's identity is not independently verified, so the site should not be treated as an established or cleared business counterparty.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer for traffic handling and exposure management, while the underlying service infrastructure is associated with Interserver, Inc. Protective infrastructure can improve resilience and reduce direct exposure, but it does not validate the operator, business claims, or external reputation.

Closing Assessment

Restrict activity to passive review until the adverse reputation finding and the claimed corporate and regulatory identity have been independently resolved; credentials, payments, confidential data exchange, and contractual commitment should remain suspended in the interim.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

- 01

Governance Risk
 - Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE
 - The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN
- 02

Sensitive Interaction Risk
 - The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat
 - An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of alvoice.com.

- The request stayed on alvoice.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by interserver.net, across 3 name servers. NOTED
- The registration is paid up to 2027-03-21. NOTED
- The earliest public archive of this site is from 2010-09-24. CLEAR
- It is hosted on IS-AS-1, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about alvoice.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
