- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Amazon.in presents an established Indian ecommerce marketplace offering product sales, account access, orders and returns, payments, recharges, travel, insurance, Prime services, seller tools, and customer support.

Scam/Impersonation Risk

No contradictions were observed. The homepage's Amazon branding, extensive ecommerce navigation, account and order functions, and consistent service coverage align with an established marketplace rather than a phishing or impersonation operation. External reputation checks reported no malicious or suspicious detections, while the site holds a top-tier global traffic footprint.

- Domain registration: 2005-02-11; 21.48 years old.
- Archive history: 5,000 snapshots spanning 2013–2017, covering 5 tracked years.
- The homepage contains no reported phishing, deceptive, or brand-impersonation indicators.

Regulatory Verification Notes

The site presents a conventional ecommerce model involving direct and third-party sales, subscriptions, advertising, digital content, payments, and seller services. The supplied material contains corporate disclosures but no licensing claim or license number; this is a limited transparency point requiring confirmation only where a specific service falls under regulated activity. A contextual broker-data check produced no match and should not be treated as a licensing determination.

- TLS certificate: Amazon RSA 2048 M04, DV validation, valid to 2026-10-09.
- The homepage identifies account, payment, seller, delivery, returns, and customer-support functions.
- No license authority or license number is presented in the supplied business-model evidence.

What to Verify Next

Confirm any service-specific regulatory requirements through the relevant official registry, and independently validate official support and payment channels before handling an exceptional or high-value transaction.

- Applicable verification scope should be determined from the relevant service and jurisdiction.
- Official contact details should be cross-checked against independently sourced Amazon corporate information.

Summary Verdict

Amazon.in is assessed as a legitimate, established, trustworthy website with a clean risk posture. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site is hosted on AS16509, Amazon.com, Inc. infrastructure in the United States. This provides a credible and operationally mature hosting context and is a mitigating signal, though hosting infrastructure alone does not establish legitimacy.

Closing Assessment

Normal account use and standard transactions are appropriate, with ordinary diligence reserved for unusual requests or materially significant transactions.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	78%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about amazon.in at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
