Full analysis

Overview

AME Modas Monte Mor presents itself as a Brazilian online clothing and accessories retailer, offering women's apparel, jewellery, bags, promotions, customer accounts, shopping-cart functionality, and checkout services through a conventional ecommerce storefront.

Scam/Impersonation Risk

The site has a **high-risk sensitive-interaction posture** because an external blacklist hit is confirmed, despite the storefront presenting as a conventional small-business retailer. The homepage contains login, newsletter, cart, and checkout functionality, while behavioral testing detected hidden forms across repeated runs and substantial page-structure changes after interaction. These findings create a material concern for credential and payment handling; the ordinary product catalogue and absence of visible page-level red flags do not offset the independent reputation contradiction. No conflicting legal-entity names or direct brand-impersonation indicators were observed.

EVIDENCE

- The external reputation assessment records the domain as blacklisted by an external source, with one malicious and one suspicious detection.
- The homepage exposes login, newsletter-signup, cart, and checkout forms; behavioral testing detected hidden forms in 2 of 2 runs.
- Behavioral testing recorded 6,001 DOM mutations and a maximum post-interaction DOM difference of 6,001.
- Domain registration records show registration on 2017-11-14, with an age of approximately 8.77 years; archive coverage is recorded from 2020-10-27 through 2024-09-27, spanning 5 years tracked.

Regulatory Verification Notes

The website presents a named retail brand, product categories, prices, promotions, customer-support details, and a physical address, but independent identity verification remains incomplete. No regulatory licence or licence number is claimed in the supplied site evidence; for an ordinary clothing retailer this is principally a disclosure and seller-verification matter rather than a standalone fraud determination. The available technical signals establish a functioning website and identifiable hosting arrangements, but a domain-validated certificate confirms transport encryption only and does not validate the operator or business claims.

EVIDENCE

- The homepage is titled “Loja online de AME Modas Monte Mor” and lists women’s clothing, accessories, promotions, shipping/payment topics, and customer-account functions.
- The site links to six internal areas, including products, login, registration, cart, and contact pages, and publishes the Instagram account `instagram.com/lojaameoficial`.
- Hosted on AS273584 (LINKED STORE BRASIL CRIACAO E DESENVOL DE SOFTWARE, BR), registered through LACNIC, in Brazil.
- TLS certificate issued by WE1 at DV validation level, valid to 2026-10-10.

What to Verify Next

Before any account creation, credential submission, or payment, the operator should be independently confirmed through official Brazilian business-registration records and through contact details obtained from an offline or independently sourced channel. Any applicable consumer, ecommerce, or payment disclosures should be checked against the relevant official authority, and transactions should use payment methods offering meaningful dispute and chargeback protection.

EVIDENCE

- The supplied evidence identifies the business as an online retailer but does not independently verify its legal operator.
- The site provides contact and physical-location information that can be cross-checked against official records and independent sources.
- The account and checkout functions create a need to validate seller identity, returns, delivery, and payment-protection terms before use.

Summary Verdict

The overall posture is **low trust**, with a confirmed external reputation contradiction materially outweighing the site's conventional retail presentation and functioning technical controls. Identity remains unverified, and sensitive interactions should therefore be treated as unsuitable without independent validation.

Infrastructure Integrity

CDN/WAF protection is present, and all observed addresses were CDN edge servers; the origin server was not observable in this analysis. This reduces direct exposure of the underlying service and is a mitigating infrastructure characteristic, but it is not evidence that the operator or transactions are legitimate.

Closing Assessment

The site should be treated as read-only until independent seller verification is completed; credential and payment activity should be deferred unless those checks produce satisfactory results.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about amemodas.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
