

Is ameport.org safe? TrustSniffer's moderate-trust assessment: 65/100

ameport.org

Verdict

65

OUT OF 100

MODERATE TRUST

ameport.org is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 70%.

What this site appears to be

Public webserver directory index listing. Contains links to multiple folders and files; no forms, monetization, or authentication prompts detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What ameport.org served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Governance Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2010.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a public web-server directory for the ameport.org domain, presenting an “Index of /” page with links to numerous folders and files rather than a conventional corporate, commercial, or financial-service interface. Its apparent function is to expose hosted web directories and resources, with no visible account, payment, or transaction workflow.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, impersonation, malicious-content, or blacklist indication, and the directory page contains no login form, sensitive form, monetization flow, or financial solicitation. The site’s content does not independently establish the identity of the operator, but its historical continuity and neutral directory presentation do not indicate a deceptive repurposing or active scam pattern. The public directory structure is an operational exposure concern because it reveals file and folder names, but that is distinct from evidence of impersonation or fraud.

EVIDENCE

- The homepage is an “Index of /” directory listing with no forms, authentication prompts, or financial transaction elements.
- The domain has 292 archive snapshots spanning 2010–2024, with 15 years tracked.
- Available external reputation checks recorded zero malicious detections, zero suspicious detections, and no blacklist or phishing indication for the domain.

Regulatory Verification Notes

The site should be treated as an unidentified web resource rather than as a verified legal entity. The available homepage does not present a company identity, licensing statement, registration number, or regulated-service disclosure; consequently, no regulatory authorization can be inferred from the site. This is a transparency and verification matter, not evidence of a scam. The domain’s established registration history, reputable registrar record, valid transport encryption, stable hosting, and absence of observed abuse signals provide supporting legitimacy context, while the operator’s real-world identity remains unverified. No broker match was identified in the available third-party contextual data.

EVIDENCE

- Domain registration records show registration in 2012, approximately 14.36 years old, through Dattatec Corp; expiration is recorded as 2032-04-12.
- The site is served from AS27823, identified as Dattatec.com, AR.
- The site’s TLS certificate is issued by YR2, uses Domain Validation (DV), and is valid to 2026-10-03.

What to Verify Next

Before any sensitive or high-value engagement, independently connect the domain to a responsible legal entity through an official corporate or institutional source. Where a proposed use involves a regulated activity, confirm the operator and applicable authorization directly with the relevant jurisdictional registry rather than relying on the website’s presence or transport security. Operationally, the directory exposure should also be reviewed by the responsible site administrator to ensure that public files and folders are intentionally accessible.

EVIDENCE

- The homepage identifies the resource only through a directory index and does not provide a conventional business or service profile.
- The displayed directory includes folders with names such as “backoffice,” “mail,” “phpmychat,” “public_html,” and “userFilesFCK,” warranting confirmation that their public exposure is intentional.
- The observed page behavior produced no external requests, hidden forms, wallet activity, clipboard activity, or suspicious inline scripts.

Summary Verdict

The overall posture is **moderate trust**: the site appears technically established and free of observed scam or impersonation contradictions, but the available evidence does not independently verify the real-world operator or

define a regulated business purpose. It is therefore more consistent with a legitimate public web resource than with an active malicious site, while remaining unsuitable for unverified sensitive engagement.

Infrastructure Integrity

The domain resolves directly to a single likely origin address hosted by Dattatec.com, with no detected CDN or WAF edge layer. This provides a straightforward hosting path but offers limited intermediary protection; infrastructure should be regarded as a mitigating technical context only, not as proof of legitimacy.

Closing Assessment

Ordinary low-risk browsing is proportionate, while operator identity and any applicable authorization should be independently confirmed before credentials, confidential information, or material funds are involved.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by registration and ownership.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of ameport.org.

- The request stayed on ameport.org. It was not redirected to another domain. CLEAR
- Registration is published under Dattatec Corp. CLEAR
- DNS for this domain is served by hostmar.com, across 2 name servers. NOTED
- The registration is paid up to 2032-04-12. CLEAR
- The earliest public archive of this site is from 2010-04-27. CLEAR
- It is hosted on AS27823, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ameport.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
