- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

AM POST is a regional Brazilian news portal focused on Manaus and Amazonas, presenting reporting on politics, police, local affairs, Brazil, world news, sports, elections, videos, weather, and entertainment through an advertising- and audience-supported publishing model.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent editorial identity, substantial news content, ordinary search functionality, and links associated with Instagram and WhatsApp; it does not present phishing flows, sensitive-data harvesting, financial-return promises, or brand-impersonation indicators. External reputation checks found no malicious or suspicious classification, and the site's established domain history further supports continuity rather than a disposable impersonation pattern.

- The homepage identifies AM POST as news coverage for Manaus, Amazonas, and contains substantial editorial content across multiple sections.
- The site's transport certificate is associated with a domain registered on 26 December 2014, approximately 11.61 years old.
- External checks recorded zero malicious and zero suspicious detections, with no blacklist or phishing result.

Regulatory Verification Notes

The site provides contact information, legal pages, and a Manaus address, supporting a recognizable publisher profile. No financial-service licensing claim is relevant to the stated news-publishing model; any corporate or editorial registration details should therefore be treated as a routine transparency matter rather than evidence of deception. The available third-party broker context produced no match.

- The contact, privacy, and terms pages are present, and the site identifies an address in Manaus.
- The domain registration record lists IHGX COMUNICACAO DIGITAL LTDA as the owner.
- Hosted on AS13335 (Cloudflare, Inc., United States).
- TLS certificate issued by WE1, validation level DV, valid to 2026-10-29.

What to Verify Next

For formal business engagement, confirm the publisher's current corporate and editorial contact details through an independently sourced channel and review the legal pages for the specific partnership or advertising arrangement under consideration. Normal account login and standard site use are appropriate.

- The homepage includes a search form only; no sensitive-data form or login flow was identified.

- The site provides contact, privacy, and terms pages for engagement-specific review.
- The stated business model is advertising, audience engagement, sponsorship, and promotional partnerships rather than deposits or promised financial returns.

Summary Verdict

AM POST presents as a legitimate, established, and trustworthy regional news publisher with no observed scam, phishing, impersonation, or malicious-reputation indicators. The overall posture supports normal interaction, including account login and standard use.

Infrastructure Integrity

The site is protected by Cloudflare's CDN/WAF and resolves primarily through Cloudflare edge infrastructure on AS13335. This reduces direct origin exposure and provides a meaningful defensive layer, although CDN protection is appropriately treated as mitigation rather than proof of legitimacy.

Closing Assessment

Proceed with normal use and apply ordinary business due diligence when entering into formal commercial or editorial arrangements.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100
Identity verification confidence	74%

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

About this assessment

A trust score summarises the evidence TrustSniffer could collect about ampost.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
