Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2004.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Asociación Mexicana de Vacunología (AMV) is an informational nonprofit association website focused on vaccination education, immunization guidance, publications, professional affiliation, public-health outreach, and links to vaccination centres in Mexico.

Scam/Impersonation Risk

The site presents a coherent nonprofit purpose and the homepage shows no login form, sensitive data-collection form, wallet activity, or commercial transaction flow. However, this benign page presentation is outweighed by confirmed external reputation contradictions: the domain is blacklisted by two listed sources, with two malicious and one suspicious detections recorded in the evaluated results. These findings do not establish that the AMV content itself is fraudulent, and no brand-impersonation indicator was observed, but they create a material risk for sensitive interactions and require the site to be treated as untrusted until the contradiction is independently resolved.

EVIDENCE

- The homepage identifies AMV as a scientific, nonprofit association founded in 2001 and describes vaccination-information and outreach activities.
- External reputation results record `vt\_malicious: 2`, `vt\_suspicious: 1`, and `external\_blacklist: true`; the blacklist sources are VT and EXTERNAL_BLACKLIST.
- Historical domain telemetry records 157 archive snapshots spanning 2004–2026, with 23 years tracked.
- Registration telemetry records creation on 2012-06-14 and an age of 14.19 years.

Regulatory Verification Notes

The site's stated nonprofit and academic purpose is plausible and its content is consistent with an informational association rather than an online financial or commercial operation. Its pages provide privacy and cookie notices, affiliation pathways, vaccination resources, social-media links, and contact details, but the supplied material does not show a licensing or registration number that independently confirms the organisation's legal or public-health status. This is a regulatory and disclosure verification gap, not by itself evidence of a scam. Independent identity linkage is assessed as likely rather than verified, so the on-site description should not be treated as proof of the real-world operator. No matching broker-reputation record was found in the supplied third-party context.

EVIDENCE

- The homepage title and content describe “Asociación Mexicana de Vacunología” as an organisation dedicated to immunization knowledge and vaccination in Mexico.
- The homepage provides links for “Quiénes somos,” “¿Qué hacemos?,” “Publicaciones,” “Afiliación,” “¿Dónde puedo vacunarme?,” privacy, and cookie notices.
- WHOIS identifies registrar NEUBOX Internet SA de CV, registrant name Rodrigo Romero Feregrino, creation date 2012-06-14, and expiry date 2027-06-14.
- The site is hosted on AS47583, identified as AS-HOSTINGER – Hostinger International Limited, CY; its TLS certificate is DV, issued by YR1, and valid to 2026-11-02.

What to Verify Next

Before any sensitive interaction, an independent party should confirm that AMV's legal existence, current officers, and public-health affiliations correspond to authoritative Mexican institutional records. Any affiliation, donation, or membership request should be validated through an independently obtained contact route or a recognised institutional social profile rather than relying solely on links presented by the website. Health guidance should be cross-checked against Mexican public-health authorities, and the external blacklist findings should be resolved with the relevant reputation providers before the domain is approved for organisational use.

EVIDENCE

- The homepage offers affiliation options for individuals and legal entities but does not provide a supplied independent registry reference.
- The site links to Facebook, Instagram, Twitter, LinkedIn, and YouTube accounts that can be checked independently for continuity and ownership.
- The site provides vaccination-centre links and immunization information that can be compared with authoritative public-health sources.
- The supplied analysis found no sensitive forms or untrusted form destinations on the captured homepage.

Summary Verdict

The overall posture is **low trust with elevated sensitive-interaction risk**. The website's nonprofit presentation is internally coherent, but the confirmed external reputation contradictions prevent the available evidence from supporting ordinary trust for account, credential, or financial activity. The real-world operator connection remains likely rather than proven.

Infrastructure Integrity

The site resolves directly to a single likely origin address on AS47583, Hostinger International Limited, with no CDN detected and no edge-IP layer identified. This is a basic hosting arrangement rather than a strong protective control; the hosting configuration neither establishes legitimacy nor offsets the external reputation concerns.

Closing Assessment

Public informational viewing may be limited to a read-only posture, while login, credential submission, membership or donation payments, and other sensitive actions should remain suspended until the independent identity and reputation checks are satisfactorily resolved.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=5

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of amv.org.mx.

- The request stayed on amv.org.mx. It was not redirected to another domain. CLEAR
- Registration is published under NEUBOX Internet SA de CV. CLEAR
- DNS for this domain is served by boxsecured.com, across 2 name servers. NOTED
- The registration is paid up to 2027-06-14. NOTED
- The earliest public archive of this site is from 2004-06-12. CLEAR
- It is hosted on AS-HOSTINGER, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about amv.org.mx at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
