

Is animegacha.fr a scam? TrustSniffer's high-risk assessment: 5/100

animegacha.fr

Verdict

5

OUT OF 100

CRITICAL RISK

animegacha.fr shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 75%.

What this site appears to be

Animegacha is a French-language technology blog covering PC hardware, network security, VPNs and OS comparisons. The site includes contact information, a newsletter signup and editorial content; no signs of financial schemes or credential harvesting.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://animegacha.fr/>

What animegacha.fr served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 1 to 3 years (registration continuity).
- Public web-archive history exists since 2020.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Animegacha.fr presents itself as a French-language technology blog covering PC hardware, network security, VPNs, and Windows-versus-Linux comparisons, with editorial articles, a newsletter signup, and an apparent advertising or affiliate-supported business model.

Scam/Impersonation Risk

No impersonation, phishing form, credential-harvesting mechanism, or financial scheme was identified in the captured homepage and associated page analysis. However, the domain is subject to a confirmed blacklist finding, and external reputation assessment recorded five malicious and one suspicious detection. This is a material contradiction to the otherwise benign editorial presentation and takes precedence over the absence of fraud features in the visible content. The operator's real-world identity also remains unverified, so the site's apparently legitimate editorial purpose cannot be treated as proof of legitimacy. The continuous archive record provides provenance context but does not neutralize the current reputation risk.

EVIDENCE

- The homepage is classified as an informational technology blog and contains editorial material on PC hardware, networking, security, VPNs, and operating-system comparisons.
- The site's transport endpoint was evaluated by external reputation sources as blacklisted, with 5 malicious and 1 suspicious detections recorded.
- The domain registration record states creation on 2024-12-20 and an age of 1.66 years.
- Historical records contain 230 snapshots from 2020-05-14 through 2026-05-15, spanning 7 years.

Regulatory Verification Notes

The site appears editorial rather than financial or investment-oriented, and no regulated financial service, license claim, or license number was identified in the supplied page content. That absence is a regulatory-transparency point rather than independent evidence of fraud, but it leaves the responsible legal entity and governance arrangements insufficiently established for institutional reliance. The site's contact information and newsletter are visible, while the single detected form is a newsletter signup rather than a sensitive authentication or payment form. A separate broker-reputation dataset produced no match; this is limited contextual information and not a licensing or regulatory determination.

EVIDENCE

- The homepage describes technology guidance and editorial topics rather than a regulated financial product or service.
- The captured page contains one newsletter-signup form, with no sensitive form, login form, hidden form, or untrusted form destination detected.
- The site's TLS certificate is issued by WE1, uses DV validation, and is valid to 2026-10-31.
- The site is served through AS13335, operated by CLOUDFLARENET – Cloudflare, Inc., US.

What to Verify Next

Before any non-public or consequential interaction, an institution should independently establish the operating entity through an authoritative corporate or business registry and confirm that the published contact channels belong to that entity. The domain's current registration details and the blacklist finding should be checked through independent, current sources, with any adverse result escalated for security review. Newsletter subscription should be considered separately from any future request for credentials, payment information, software installation, or account access.

EVIDENCE

- The homepage provides contact information and a newsletter signup but does not independently establish the operator's legal identity.
- The visible page analysis found no login form, credential collection, wallet connection, or financial transaction mechanism.
- The external assessment records a confirmed blacklist status requiring independent validation before institutional engagement.

Summary Verdict

The overall posture is **critical trust risk**, driven by confirmed external reputation contradictions that outweigh the site's benign editorial appearance and technically stable presentation. The website may be readable as informational content, but its legitimacy and suitability for sensitive interaction are not established.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer against direct exposure of the underlying service, but it is not evidence that the operator is legitimate. All observed addresses were CDN edge addresses, and the origin server was not observable in this analysis.

EVIDENCE

- Observed edge addresses: 104.21.25.118, 172.67.134.52, 2606:4700:3032::6815:1976, and 2606:4700:3037::ac43:8634.
- All four observed addresses resolve through AS13335, with 4 CDN edge IPs and 0 likely origin IPs.
- The hosting provider is CLOUDFLARENET – Cloudflare, Inc., US.

Closing Assessment

Institutional activity should remain limited to passive review until the operator, contact channels, and adverse reputation findings have been independently resolved; credentials, payments, software downloads, and other sensitive actions should not be undertaken on the basis of the site's presentation alone.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of animegacha.fr.

- The request stayed on animegacha.fr. It was not redirected to another domain. CLEAR
- Registration is published under OUIHEBERG. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-12-20. NOTED
- The earliest public archive of this site is from 2020-05-14. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about animegacha.fr at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
