

Is annopk.com a scam? TrustSniffer's high-risk assessment: 0/100

annopk.com

Verdict

0

OUT OF 100

CRITICAL RISK

annopk.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 70%.

What this site appears to be

Small Thai-language landing/contact page 'Anno PK' created with GoDaddy site builder. Contains contact form collecting name and email, cookie notice, and reCAPTCHA. No payment, investment, or credential-harvesting indicators detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

What annopk.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2018.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a small Thai-language promotional and portfolio landing page titled “Anno PK,” built with GoDaddy Website Builder. It presents general creative-services messaging, a contact form, and an email-list signup, indicating an informational marketing purpose rather than an investment, payment, or account-access business model.

Scam/Impersonation Risk

The site has a **material external threat contradiction**: it is blacklisted, with malicious detections from multiple security providers, including Kaspersky and Sophos. This finding is not supported by the page content itself, which presents a basic informational landing page without observed payment, investment, login, credential-harvesting, or cryptocurrency features; however, the external detections are sufficiently significant that the benign presentation cannot be treated as a clearance signal. Separate abuse reports concern a shared provider IP, so those reports are not independently attributable to the site operator, but the domain-level blacklist and malicious detections remain decisive. The domain is long-established and its recorded archive shows continuity

rather than suspicious repurposing; these provenance positives do not offset the current external threat findings. Identity verification remains unverified, and no evidence establishes the real-world operator behind “Anno PK.”

EVIDENCE

- The domain was registered on 2014-02-12 and is recorded as approximately 12.53 years old.
- The web archive contains 4 snapshots spanning 2018–2025, with 8 years tracked.
- External reputation assessment records 11 malicious detections and 1 suspicious detection; Kaspersky and Sophos are among the flagged providers, and blacklist status is confirmed.
- The homepage is a contact/landing page with no observed login, payment, investment, or credential-harvesting mechanism.

Regulatory Verification Notes

The available site material describes a promotional or portfolio activity but does not state a licensing authority or license number. This is a regulatory-disclosure gap requiring verification rather than standalone evidence of fraud. The operator’s identity is not independently verified, so the name presented on the page should be treated as an on-site label, not proof of a legal entity. The valid transport certificate and established registration are positive technical and provenance signals, but they do not establish regulatory authorization or neutralize the external blacklist findings.

EVIDENCE

- The site’s hosting resolves to AS16509, Amazon Technologies Inc. (AMAZON-02), US.
- The site uses a DV TLS certificate issued by GoDaddy TLS Intermediate CA DV - R1v1, valid to 2026-10-18T11:45:11+00:00.
- The homepage provides marketing and contact functionality but does not identify a licensing authority or license number in the supplied content.

What to Verify Next

Before any sensitive interaction, an independent party should confirm the operator’s legal identity and any required authorization through the relevant official registry, using details obtained independently of the website. Security teams should also resolve the confirmed blacklist status with current endpoint scanning and incident-response procedures before permitting access beyond passive viewing. Any contact or subscription workflow should be tested only with non-sensitive information and within an isolated environment until those checks are complete.

EVIDENCE

- Independent identity and authorization checks are necessary because the available identity status is unverified and the site’s regulatory disclosure is unclear.
- Current security review should account for the confirmed malicious and blacklist detections rather than relying on the page’s informational appearance.
- Sensitive actions, including credential submission, account access, or financial interaction, are not supported by the current trust determination.

Summary Verdict

The website presents as a simple informational landing page, but the overall trust posture is critical because strong external threat indicators and confirmed blacklist status outweigh the site's otherwise ordinary content and technical presentation. The available evidence does not support treating the website as suitable for sensitive interaction or as an independently verified legitimate entity.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, with observed edge addresses 13.248.243.5 and 76.223.105.230 hosted on AS16509 by Amazon Technologies Inc.; the origin server was not observable. This infrastructure provides a mitigating layer against direct exposure, but shared CDN protection is not proof of legitimacy and cannot offset the external reputation findings.

Closing Assessment

Access should remain limited to passive inspection until the operator's identity, authorization, and current security status have been independently established; credentials, personal information, and financial interactions should not be submitted in the interim.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
- The page made background requests to destinations TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_XHR
- The page exchanged network traffic with destinations TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_TRAFFIC
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Signals weighed against the site

- AbuseIPDB: 8 reports on hosting IP 13.248.243.5 (Amazon Technologies Inc., Content Delivery Network), 19% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of annopk.com.

- The request stayed on annopk.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under GoDaddy.com, LLC. [CLEAR](#)
- DNS for this domain is served by domaincontrol.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-02-12. [NOTED](#)
- The earliest public archive of this site is from 2018-08-05. [CLEAR](#)
- It is hosted on AMAZON-02, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about annopk.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
