Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 2014.
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is an established German reverse-telephone lookup and business-directory service that enables visitors to identify unknown callers, consult community reports of spam or fraud, contribute ratings and comments, and obtain telephone-safety guidance.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious forms, cloaking, or other confirmed fraud signals were observed. The long operational history is consistent with the current caller-information purpose, with no evidence of suspicious repurposing. External reputation checks were also clean, supporting the assessment that this is a legitimate service rather than an imitation or credential-harvesting operation.

- The domain was registered in 2014 and is approximately 12 years old.
- The domain has 915 archive snapshots spanning 2014–2026, representing 13 years of tracked history; the historical record shows no suspicious repurposing or semantic drift.
- External reputation telemetry recorded 0 malicious and 0 suspicious detections, no malicious safe-browsing classification, no external blacklist finding, and 0 abuse reports.
- Homepage interaction testing found no login form, hidden form, untrusted form destination, wallet interaction, clipboard hijacking, fingerprinting, suspicious inline scripts, or cloaking.

Regulatory Verification Notes

The service presents an informational, community-contribution model rather than a regulated financial or brokerage activity, and it makes no licensing claim requiring confirmation in the supplied material. The homepage provides visible routes to an imprint, privacy information, contact details, and an about page, which is consistent with an established German public-facing information service. Its on-page legal disclosure content was not supplied in sufficient detail for a substantive review, but no conflicting legal identities or misleading regulatory representations were identified.

- The homepage visibly links to imprint, privacy, contact, and about pages.
- The homepage describes free telephone-number lookup, community ratings, business-directory information, and fraud-awareness material, without presenting financial or investment services.
- The site's transport encryption uses a domain-validated certificate issued by YR1, valid until 2026-09-19.
- No matching broker profile or third-party regulatory claim was identified for the site.

What to Verify Next

Organizations relying on the directory for investigations should corroborate individual caller identities and community allegations through authoritative telephone, corporate, or regulatory records, because user-submitted reports are not equivalent to verified attribution. Privacy and data-governance reviewers should examine the published imprint and privacy notice against the intended use of personal or business telephone data. Official contact channels may also be confirmed independently before formal commercial or legal correspondence.

- The homepage states that visitors can read other users' assessments and submit their own experiences, making source-level corroboration appropriate for consequential decisions.
- The homepage reports more than 345,380 user assessments accumulated over 12 years, indicating a substantial community-generated dataset.
- The homepage provides instructions for blocking numbers through Fritzbox equipment and reporting relevant calls to Germany's Federal Network Agency.
- The supplied homepage contained no sensitive-data form or password-entry mechanism requiring additional credential-control measures.

Summary Verdict

The website has a high-trust posture and is assessed as legitimate, established, and trustworthy. Its identity, operating history, content, behavior, and external reputation converge without contradiction. Normal interaction, including account login and standard use where available, is appropriate.

Infrastructure Integrity

The site resolves directly to a likely origin server rather than operating behind a CDN or WAF. This is a conventional hosting configuration and is not evidence of illegitimacy; infrastructure telemetry identifies a single German-hosted address with no confirmed abuse pattern.

- The site is served from AS51167 by CONTABO – Contabo GmbH, DE, at the single resolved address 95.111.225.199.
- Infrastructure resolution identified 1 likely origin IP, 0 edge IPs, and no CDN.
- The hosting address is categorized as data-center/web-hosting infrastructure and carried 0 abuse reports with an abuse-confidence value of 0.

Closing Assessment

Prospective users may engage with the service normally, while applying ordinary source-validation practices before treating community-contributed caller reports as authoritative evidence.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	50%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of anruferauskunft.de.

- The request stayed on anruferauskunft.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by domainoffensive.de, across 3 name servers. NOTED
- The earliest public archive of this site is from 2014-07-26. CLEAR
- It is hosted on CONTABO, from a server in DE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about anruferauskunft.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
