- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2016.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

AppBarber is a Portuguese-language SaaS platform for barbershops and beauty salons, presenting online scheduling, customer loyalty, financial reporting, and web and mobile management applications through subscription plans with a 30-day free trial.

Scam/Impersonation Risk

No phishing, impersonation, malicious-reputation, or conflicting legal-identity contradiction was observed. The site's commercial proposition is coherent with a conventional business-management SaaS service, and the available content includes substantive product information, pricing, contact details, and an account-registration workflow rather than deceptive investment or high-pressure financial claims. Behavioral inspection did identify suspicious inline scripting and some non-whitelisted external requests, but it found no cloaking, hidden forms, wallet activity, clipboard manipulation, or brand-impersonation indicators; these are implementation-level observations rather than evidence of a scam. The overall evidence therefore supports an apparently legitimate, low-risk website while leaving the real-world operator identity independently unverified.

EVIDENCE

- The domain was registered on 2015-07-14 and is 11.08 years old, with registration scheduled to expire on 2028-07-14.
- Archive records show 131 snapshots from 2016-06-17 through 2026-06-06, covering 11 years.
- Behavioral inspection recorded 10 suspicious inline scripts, 30 external XHR requests, and 25 external posts; no cloaking or hidden forms were detected.

Regulatory Verification Notes

AppBarber presents itself as a software provider rather than a regulated financial or investment service. No regulated license is claimed in the available site material, so licensing is not a central legitimacy issue for the stated business model; however, the applicable legal entity, service terms, billing conditions, and consumer protections should be clear before commercial engagement. The domain registration record names StarApp Sistemas LTDA-ME, but the available evidence does not independently verify that this entity operates the website. This is a qualification on identity assurance, not an identity contradiction.

EVIDENCE

- The homepage and associated site content identify a SaaS business with pricing, contact information, an address, and a signup process.
- The domain registration record lists StarApp Sistemas LTDA-ME as the owner.
- The site is served from AS16509, Amazon.com, Inc. (Amazon-02), United States.
- TLS uses a DV certificate issued by Sectigo Public Server Authentication CA DV R36, valid through 2026-09-27T23:59:59+00:00.

What to Verify Next

Before credential or payment interactions, independently confirm that the operating entity shown in the service agreement, invoice, and payment descriptor is consistent with the business represented on the site. Review cancellation, renewal, refund, data-processing, and support provisions, and confirm official contact channels through an independently obtained source rather than relying solely on page links. Account users should use a unique password and establish that the selected payment method provides appropriate dispute and payment protection.

EVIDENCE

- The landing page contains an account-creation form requesting an email address and password.
- The pricing and contact content provides the relevant basis for checking billing terms, support arrangements, and commercial accountability.
- The site describes a cloud-hosted service with recurring subscription plans, making contractual and renewal terms material to onboarding.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. Confidence is qualified because the real-world operator identity has not been independently verified, but no contradictory scam or impersonation signals were observed.

Infrastructure Integrity

The website is protected by AWS CDN/WAF infrastructure, with all observed addresses associated with Amazon’s edge network and no origin candidate exposed in this analysis. This reduces direct origin exposure and is a mitigating infrastructure signal, although protective hosting alone does not establish legitimacy.

Closing Assessment

Ordinary use is proportionate to the assessed posture, subject to completing the independent identity, contractual, and payment-protection checks before submitting credentials or making payments.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of appbarber.com.br.

- The request stayed on appbarber.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by awsdns-48.org, across 4 name servers. NOTED
- The registration is paid up to 2028-07-14. CLEAR
- The earliest public archive of this site is from 2016-06-17. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about appbarber.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
