

Is applogic.be safe? TrustSniffer's low-trust assessment: 40/100

applogic.be

Verdict

40

OUT OF 100

LOW TRUST

applogic.be is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Personal/agency site for Kenneth Van Gijssel (AppLogic), a Java developer offering web and desktop applications, PWAs, and WordPress sites. Includes services, plan of approach, contact form, phone, email and physical address in Berlaar, Belgium.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

AppLogic is a small-business software consultancy website presented under the AppLogic name and associated with Kenneth Van Gijssel. It offers custom Java-based web and desktop applications, Progressive Web Apps, WordPress websites, consultations, and project-development services, with contact and location information for prospective clients.

Scam/Impersonation Risk

The site's pages present a coherent small-business consultancy, and the observed site behavior showed no login form, hidden sensitive form, wallet interaction, cloaking, clipboard manipulation, or brand-impersonation indicators. However, this benign page presentation is contradicted by material external threat signals: two evaluated detections classified the domain as malicious, and the domain is blacklisted by two listed sources. These findings support a clearly cautionary posture for credentials, financial activity, or other sensitive interactions, even though the site itself does not display an obvious phishing workflow. No identity contradiction or direct impersonation finding was observed.

EVIDENCE

- The homepage and services pages describe AppLogic as a Java development consultancy providing web applications, desktop applications, Progressive Web Apps, and WordPress sites.
- External reputation assessment recorded 2 malicious detections and confirmed blacklist status from 2 sources.
- Domain registration records show registration on 2018-12-17; age 7.68 years.
- Archive records show 191 snapshots spanning 2019-10-17 through 2026-05-21, with 8 years tracked and no reported semantic repurposing or category drift.

Regulatory Verification Notes

The About, Services, and Contact content identifies Kenneth Van Gijssel and AppLogic, describes a project-based software-services business, and provides a Belgian location. The available evidence supports a likely connection between the site and an individual or small consultancy, but it does not independently verify the operator's legal identity. No regulated financial, investment, or other licensed activity is presented; accordingly, the absence of a license claim is primarily a disclosure matter rather than evidence of a scam. The site's limited metadata and lack of structured business information reduce the clarity available to a prospective commercial counterparty.

EVIDENCE

- The About and Contact pages identify Kenneth Van Gijssel and provide a physical address in Berlaar, Belgium.
- The Services and project-approach pages describe custom software development and consultation rather than a regulated financial product.
- Hosting is confirmed on AS16276, OVH - OVH SAS, FR.
- The site's TLS certificate is issued by YE2 at DV validation level and is valid to 2026-11-17T19:57:08+00:00.

What to Verify Next

Before any sensitive engagement, an enterprise or prospective client should independently confirm the operator's legal or commercial registration through the relevant Belgian registry and validate that the contracting entity named in proposals, invoices, and payment instructions matches that record. Contact channels should be confirmed through an independently obtained source, and any software-delivery, data-processing, intellectual-property, warranty, and payment terms should be documented contractually before work begins. Because external threat detections conflict with the site's otherwise ordinary consultancy presentation, credentials and financial details should not be submitted until those checks are complete.

EVIDENCE

- The Contact page provides a contact form accepting name, email, phone, and message fields, with no observed password or payment field.
- The site's navigation includes dedicated About, Services, consultation, and Contact pages that can be used to compare identity and commercial terms.
- Public links are provided to Facebook, X, WhatsApp, and LinkedIn; these channels can be checked independently for continuity of the operator's identity and business activity.

Summary Verdict

The overall posture is **low trust with sensitive-interaction risk**. The website appears to describe a genuine small consultancy, but the confirmed blacklist status and malicious detections are decisive contradictions that prevent the site from being treated as safe for credentials, financial details, or other sensitive exchanges.

Infrastructure Integrity

The site is protected by a CDN/WAF arrangement, with observed edge addresses associated with OVH - OVH SAS in France; the origin server was not observable in the assessment. This reduces direct exposure of the origin and is a mitigating infrastructure characteristic, but it does not offset the external reputation findings.

Closing Assessment

The appropriate business posture is to limit interaction to non-sensitive review while independently validating the contracting entity and confirming the legitimacy of any proposed transaction through trusted channels.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of applogic.be.

- The request stayed on applogic.be. It was not redirected to another domain. CLEAR
- DNS for this domain is served by ovh.net. NOTED
- The earliest public archive of this site is from 2019-10-17. CLEAR
- It is hosted on OVH, from a server in FR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about applogic.be at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
