

Is arshtechnosolutions.com a scam? TrustSniffer's high-risk assessment: 5/100

arshtechnosolutions.com

Verdict

5
OUT OF 100

CRITICAL RISK

arshtechnosolutions.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

Marketing / product pages for Arsh Technology offering predictive dialer, VoIP minutes, hosted dialer, VOS3000 switch, CRM integration and call center setup services. Contact details (phone, email, Skype) and brief company description present. No strong legal, certification, or ecommerce/payment details visible.

Evidence status and limitations

Evidence completeness: **UNKNOWN**

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

What arshtechnosolutions.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website is a corporate services site operated under the name Arsh Technology, presenting predictive dialer systems, VoIP minutes, hosted dialers, VOS3000 switching, CRM integration, web development, SEO, and call-center setup or consulting for business customers. Its apparent business model is the sale of telecommunications software, hosting, support, and related implementation services.

Scam/Impersonation Risk

The site-level content presents a conventional B2B services model and does not show a login form, payment workflow, wallet connection, hidden form, suspicious script, or detected brand impersonation. However, this relatively ordinary presentation is outweighed by external threat intelligence recording multiple malicious detections and a confirmed blacklist status attributed to two external sources. The result is a material contradiction between the site's surface appearance and its external reputation, creating a high risk for credentials, account access, payments, or other sensitive interactions. No identity contradiction or direct phishing indicator was observed in the supplied page analysis.

EVIDENCE

- The homepage presents Arsh Technology as an Indian IT firm offering predictive-dialer, VoIP, BPO, technical-support, and call-center services.
- External reputation checks recorded `vt\_malicious: 3`, `vt\_suspicious: 2`, and `external\_blacklist: true`; the blacklist determination is attributed to two external sources.
- The site's behavioral capture recorded 0 external XHR requests, 0 hidden forms, 0 password-external forms, and 0 wallet-provider detections.

Regulatory Verification Notes

The site's apparent business activity is commercial telecommunications and call-center technology provision rather than a clearly regulated financial service. Its public content includes a company description and contact details, but does not present a corporate registration number, regulatory license, certification, or other independently verifiable legal disclosure. The available evidence identifies the registered organization as Arsh Technology and the registrant as Gurjeet Singh, but the real-world operator identity remains unverified. A long-established registration and valid transport encryption are positive administrative and technical indicators, but they do not offset the external reputation contradiction or establish regulatory authorization.

EVIDENCE

- Domain registration: created 2011-02-21T14:04:21Z, registered through PDR Ltd. d/b/a PublicDomainRegistry.com, with `age\_years: 15.5` and expiry on 2027-02-21T14:04:21Z.
- Archive record: 114 snapshots spanning 2013-10-08T14:56:27Z to 2026-02-09T02:38:04Z, covering 14 years tracked.
- Hosted on AS199404, WHG-IN - WHG Hosting Services Ltd, GB.
- TLS certificate: issuer YR1, validation level DV, valid to 2026-10-10T14:03:28+00:00.

What to Verify Next

Sensitive interaction should be suspended unless the operator can be independently authenticated. Before any commercial engagement, an organization should confirm Arsh Technology's legal registration and applicable telecommunications or call-center authorizations through the relevant official registry, obtain a contract naming the contracting entity and payment beneficiary, and validate the published contact channels through an independent offline route. Any proposed software, hosting, or VoIP deployment should also undergo normal procurement, malware, access-control, and data-processing review.

EVIDENCE

- The homepage contains one contact form, with no sensitive fields and no untrusted submission destination detected.
- The public site provides phone, email, and Skype contact details but no visible payment or e-commerce workflow.
- The site analysis found no login form, hidden sensitive form, clipboard hijacking, wallet-drainer behavior, or cloaking.

Summary Verdict

The overall posture is **critical trust risk** with a clear risk of sensitive-interaction exposure. The site's conventional business presentation does not provide sufficient grounds to rely on it for authentication, credentials, financial transactions, or other high-impact engagement.

Infrastructure Integrity

The site resolves directly to one likely origin IP rather than a CDN edge, with no CDN or WAF detected; the hosting infrastructure is WHG-IN - WHG Hosting Services Ltd. in Great Britain on AS199404. This infrastructure is technically identifiable, but it provides no protective intermediary that would materially reduce the significance of the external reputation findings.

Closing Assessment

Enterprise users should treat the site as unsuitable for sensitive interaction unless independent legal, commercial, technical, and payment-party checks are completed and the external reputation concerns are satisfactorily resolved.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, external reputation.

01 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of arshtechnosolutions.com.

- The request stayed on arshtechnosolutions.com. It was not redirected to another domain. CLEAR
- Registration is published under PDR Ltd. d/b/a PublicDomainRegistry.com. CLEAR
- DNS for this domain is served by co.in, across 2 name servers. NOTED

- The registration is paid up to 2027-02-21. NOTED
- The earliest public archive of this site is from 2013-10-08. CLEAR
- It is hosted on WHG-IN, from a server in GB. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about arshtechnosolutions.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
