

Is assaablloy.com a scam? TrustSniffer's high-risk assessment: 0/100

assaablloy.com

Verdict

0

OUT OF 100

CRITICAL RISK

assaablloy.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 55%.

What this site appears to be

A Namecheap-managed parked domain page indicating assaablloy.com is registered and offering domain auction listings and related links. No login, no payment forms, primarily advertising/auction content.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	9 flagged it VirusTotal	RISK
Google Safe Browsing	Not listed Google	CLEAR
Abuse reports on the host	0 reports AbuseIPDB; shared hosting inflates this count	NOTED

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website is a Namecheap-managed parked-domain page for assaablloy.com, presenting domain-auction listings, bidding links, and related advertising rather than an identifiable operating service or financial-product platform.

Scam/Impersonation Risk

The site has a **critical sensitive-interaction risk posture** because external threat intelligence recorded a confirmed blacklist hit and multiple malicious detections, including detections associated with Kaspersky and Sophos. This conflicts materially with the otherwise benign appearance of the homepage as a parked domain page. No separate brand-impersonation or identity-inconsistency finding is recorded, but the confirmed blacklist status is sufficient to warrant treating login, credential submission, payment, and other sensitive interaction as unsafe. No suspicious contact-email anomaly was identified in the supplied page findings.

EVIDENCE

- External reputation assessment: 9 malicious detections were recorded from 14 effective evaluations; Kaspersky and Sophos were among the flagged vendors.
- Homepage: the captured content is a parked domain and auction landing page with no login or payment form, which does not account for the external malicious detections.
- Registration record: the domain was created on 2025-10-07T05:12:21Z and is approximately 0.87 years old.

Regulatory Verification Notes

The available page is not an operating financial-service presentation and does not provide a company identity, licensing number, or regulatory authority for verification. This is a disclosure gap appropriate to the page type, but it means the real-world operator is not independently established by the supplied evidence. The registrar information identifies NAMECHEAP INC, while registrant details use a privacy service; that is an administrative registration characteristic, not by itself proof of misconduct. A valid transport certificate provides connection security only and does not establish authorization, ownership, or regulatory status.

EVIDENCE

- Registrar record: NAMECHEAP INC; creation date 2025-10-07T05:12:21Z; expiration date 2026-10-07T05:12:21Z; age 0.87 years.
- Transport encryption: TLS certificate issued by YE2, validation level DV, valid to 2026-11-08T08:39:58+00:00.
- Homepage: no company registration, license number, regulator, or formal legal-entity disclosure is presented.

What to Verify Next

Any intended auction or transaction should be validated through the registrar's independently accessed official channels, rather than through links reached from the parked page. The counterparty, payment destination, refund terms, and final destination should be confirmed before any transaction; any later page requesting credentials or financial information should be assessed as a separate trust decision. Security teams should also retain the blacklist finding for blocking and monitoring decisions until it is independently resolved.

EVIDENCE

- Registrar context: the page identifies Namecheap as the domain registrar and directs visitors toward auction activity.
- Page behavior: two captured runs exposed no login, password, wallet, or sensitive payment form.
- External reputation: the domain remains associated with a confirmed blacklist finding requiring resolution before sensitive engagement.

Summary Verdict

The overall posture is **critical risk**, with the site's apparent parked-domain function unable to offset the confirmed external threat detections. The available evidence does not independently verify a real-world operator, and sensitive interaction should not be considered appropriate.

Infrastructure Integrity

The resolved infrastructure is associated with Namecheap hosting in the United States, with no CDN edge identified and a single likely origin address exposed. Direct server telemetry separately identified WorldStream infrastructure in the Netherlands; the valid certificate improves transport protection but does not mitigate the adverse reputation assessment.

EVIDENCE

- Resolved hosting: AS22612, NAMECHEAP-NET — Namecheap, Inc., US; one unique IP, 2.59.170.19.
- Direct server telemetry: AS49981, WorldStream — WorldStream B.V., NL; server IP 2.59.170.19.
- CDN and origin posture: CDN detected false; edge IP count 0; likely origin IP count 1.

Closing Assessment

The appropriate enterprise disposition is to permit passive observation only, block or closely monitor the domain where controls allow, and prohibit credential, payment, or other sensitive interaction unless the external threat

finding is formally cleared and the intended transaction is independently validated.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

- 01

Governance Risk
 - The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN
 - Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE
- 02

Sensitive Interaction Risk
 - The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat
 - An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of assaablloy.com.

- The request stayed on assaablloy.com. It was not redirected to another domain.

CLEAR
- Registration is published under NAMECHEAP INC.

CLEAR
- DNS for this domain is served by registrar-servers.com, across 2 name servers.

NOTED
- The registration is paid up to 2026-10-07.

NOTED
- It is hosted on WorldStream, from a server in NL.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about assaablloy.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
