Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Assist is a long-established Russian payment-technology provider offering acquiring, payment processing, fiscalization, fraud prevention, tokenization, analytics, and related infrastructure services for businesses and financial organizations. Its corporate site presents business-facing products, customer segments, pricing and service information, support channels, and integration options, with revenue apparently derived from connection fees and transaction commissions under partner-bank arrangements.

Scam/Impersonation Risk

No contradictions were observed across the site's identity, content, reputation, and behavioral signals. The homepage presents a coherent corporate B2B model, describes concrete payment services, identifies business customer segments, and provides support and integration pathways without phishing, impersonation, or deception indicators. External reputation checks found no malicious or suspicious detections, and the site has an established global web presence.

- The homepage identifies Assist as a payment-solutions developer and integrator and describes acquiring, fiscalization, anti-fraud, tokenization, analytics, and banking services.
- The homepage presents customer segments including retailers, airlines, logistics companies, insurers, banks, and small and medium-sized businesses.
- Domain registration: 1999-03-01; age 27.44 years; registrar RU-CENTER-RU.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist hit.

Regulatory Verification Notes

The site provides substantial business, product, pricing, support, and legal-entity information, supporting a transparent commercial operating model. A specific license or registration number is not identified in the supplied page evidence, so regulated counterparties should treat licensing status as a verification item rather than as evidence of misconduct. The absence of a third-party broker match is contextual reputational information only and does not constitute a regulatory determination.

- The homepage links to "About Assist," service procedures, documentation, partner banks, news, and customer-support resources.
- The homepage states that services are provided to businesses and financial organizations through contracts with partner banks.
- Hosting infrastructure: AS200350, YandexCloud — Yandex.Cloud LLC, RU.

- TLS certificate: R13 issuer, domain validation (DV), valid through 2026-08-21.

What to Verify Next

A prospective institutional counterparty should confirm any licensing, payment-institution status, or partner-bank arrangements directly with the relevant official registry or contractual counterparties. Commercial onboarding should also validate the legal entity, settlement terms, and official support channels through independently sourced corporate records.

- The homepage provides product, pricing, legal-entity, contact, support, and integration information for comparison against independent records.
- The site identifies partner-bank contracting as part of its commercial model.
- The page offers documentation and service-procedure materials suitable for procurement and due diligence review.

Summary Verdict

The site presents as a legitimate, established, and trustworthy corporate payment-services provider. Its coherent business identity, mature service offering, clean external reputation, and stable technical operation support normal interaction, including account login and standard use.

Infrastructure Integrity

The site resolves to a single YandexCloud-hosted address and does not appear to use a CDN or WAF edge layer. This is a straightforward hosting posture rather than evidence of deceptive infrastructure, while the valid TLS certificate provides transport protection.

Closing Assessment

Normal business interaction is appropriate, with routine institutional verification of contractual, legal, and settlement details before formal onboarding.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of assist.ru.

- The request stayed on assist.ru. It was not redirected to another domain. [CLEAR](#)

- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by net., across 2 name servers. NOTED
- The registration is paid up to 2027-03-31. NOTED
- It is hosted on YandexCloud, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about assist.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
