

Is asu.edu legit? TrustSniffer's high-trust assessment: 100/100

asu.edu

Verdict

100

OUT OF 100

HIGH TRUST

asu.edu appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 70%.

What this site appears to be

Official Arizona State University homepage offering navigation to admissions, academics, research, news, athletics, alumni and giving resources. Contains promotional and informational content about programs, campuses and services.

Evidence status and limitations

Evidence completeness:

UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2007.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Arizona State University's website is the public-facing portal for a major research university, presenting admissions, degree programs, research, news, athletics, alumni services, giving, campus information, and related institutional resources. Its apparent model is institutional and educational, supported by tuition and fees, public and research funding, philanthropy, and auxiliary services, with transactional functions such as applications, donations, and job listings.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence, including no phishing, impersonation, malicious-content, or conflicting legal-identity signal. The homepage presents a coherent university identity, extensive academic and institutional navigation, and links to established social-media profiles; its content is consistent with an educational institution rather than a deceptive or abuse-oriented operation. The site also has a prominent global traffic footprint and clean external reputation results. The available evidence supports an apparently legitimate, established website, while the real-world operator identity remains likely rather than independently proven.

EVIDENCE

- Homepage: Identifies Arizona State University and provides navigation for admission, academics, research, athletics, alumni, giving, and institutional information.
- Homepage: No login form, hidden form, external password form, wallet activity, or phishing indicator was detected.
- Domain and archive record: Domain registration continuity 2007; age 18.81 years.
- Web archive: 1 snapshot spanning 2007–2007, with 1 year tracked.

Regulatory Verification Notes

The available pages present a public-university purpose and do not claim to operate as a separately regulated financial or brokerage entity. No license or registration number is presented in the supplied page evidence; this is a disclosure and verification point, not evidence of deception in this institutional context. The on-site identity is evidence-consistent and supported by institutional branding and linked social presence, but it should not be treated as independently verified operator identity. No matching broker-reputation signal was identified.

EVIDENCE

- Homepage and institutional navigation: Links are provided for About, Contact, Admission, Academics, Research, Athletics, Alumni, and Giving.
- Homepage: The site title identifies “ASU Homepage | Arizona State University,” and four social profiles are linked for the institution.
- Hosting infrastructure: Served from AS13335 (Cloudflare, Inc., US).
- Transport security: TLS certificate issued by YE1, validation level DV, valid to 2026-10-29.

What to Verify Next

Before credential or payment interactions, an institution or enterprise should independently confirm the relevant Arizona State University contact and transaction channels through an offline or independently sourced route. For applications, donations, or other payments, the applicable terms, refund or return conditions, beneficiary details, and payment-protection arrangements should be checked against the institution’s independently obtained information. Any regulatory question should be directed to the relevant education or public-sector authority rather than inferred from the presence of a secure website.

EVIDENCE

- Admission page: Use the independently confirmed institutional channel to validate application instructions and any associated payment request.
- Giving page: Confirm beneficiary details, donation terms, and payment protections before completing a transaction.
- Contact and About pages: Cross-check institutional contact details through an independent directory or known institutional source.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a low-risk trust posture. The absence of contradictory signals, the coherent institutional purpose, and the convergence of page, reputation, domain, and technical evidence support normal website interaction, subject to ordinary independent checks where credentials or payments are involved.

Infrastructure Integrity

The site is protected by Cloudflare’s CDN/WAF infrastructure, with observed edge addresses on AS13335 and additional edge infrastructure on AS16509; potential origin candidates were also observed. This protective architecture mitigates direct exposure and improves resilience, but remains a security-control signal rather than proof of institutional legitimacy.

Closing Assessment

Routine informational use is proportionate to the available evidence; credential and payment interactions should proceed only after the relevant institutional identity, transaction terms, and payment protections have been independently confirmed.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Identity verified on page
- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of asu.edu.

- The request stayed on asu.edu. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2007-10-19. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about asu.edu at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a

legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
