- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2012.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website presents Atlas Hotel in Krasnodar as a local hospitality business, offering accommodation information, room reservations, hotel services, and booking inquiries for prospective guests.

Scam/Impersonation Risk

No contradictions were observed. The site's content is consistent with a conventional hotel operation rather than a phishing, impersonation, or abuse-oriented service: it lists room categories including Suite, Standard Plus, Standard Light, and Standard rooms, displays nightly prices, and promotes breakfast and sauna services. The booking mechanism is a contact or booking-request form; the inspected pages showed no login form, payment widget, wallet connection, hidden sensitive form, or brand-impersonation indicator. Available external checks identified no malicious detections, phishing findings, or broker-dataset match, although reputation coverage was partial. The site publishes the contact address info@atlas-krasnodar.ru, which uses a valid domain format; no contact-channel integrity anomaly was identified.

EVIDENCE

- The homepage and room pages describe Atlas Hotel in Krasnodar, room categories, nightly prices, and accommodation services.
- The booking/contact page contains one non-sensitive booking request form and no password or payment fields.
- The domain was registered on 2012-01-10 and is approximately 14.62 years old; the registrar is RU-CENTER-RU.
- Historical records contain 317 snapshots spanning 2012–2026, covering 15 years with a maximum recorded gap of 1 year.

Regulatory Verification Notes

The legal and identity pages provide a hotel name, a Krasnodar address, telephone numbers, hotel rules, and a personal-data protection page. The available evidence does not show a claimed regulatory license or registration number, and the on-page disclosure position is therefore unclear; for a hotel booking site, this is a transparency item to resolve rather than evidence of deception. The site appears consistent with an established hotel website, but the available evidence does not independently connect the online property to a verified real-world operator. The absence of a match in the reviewed broker-reputation context is only a contextual positive signal and is not a licensing determination.

EVIDENCE

- The homepage and contact page identify “Atlas Hotel” in Krasnodar and provide the stated address and telephone contact details.
- The rules and personal-data protection pages provide operational and privacy disclosures but no license or registration number is shown in the supplied content.
- The site is served from AS48018, FORNEX-RU-AS – Fornex Hosting S.L., ES.
- The transport certificate is issued by YR2, uses Domain Validation (DV), and is valid to 2026-09-25T04:02:43+00:00.

What to Verify Next

Before credential or payment interactions, an independent check should confirm that the hotel’s address and telephone details correspond to the intended accommodation business. Booking terms, cancellation conditions, the final price, and the party receiving payment should be confirmed through an independently obtained contact route, with payment-protection options retained where available.

EVIDENCE

- The site’s contact page supplies independent contact details that can be cross-checked outside the website.
- The rules and pricing pages provide the appropriate source material for confirming cancellation, payment, and booking conditions before a reservation is finalized.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate hotel website and supports a high-trust, low-risk posture. The conclusion is well grounded by the site's sustained historical presence, coherent hospitality content, stable technical operation, and absence of observed contradiction or abuse indicators, while the real-world operator remains independently unverified.

Infrastructure Integrity

The site resolves directly to a single origin address, with no CDN or WAF detected and no edge-provider layer identified. Direct hosting provides less intermediary protection than a CDN, but it is not, by itself, evidence of malicious activity.

Closing Assessment

Standard browsing and booking inquiry activity is proportionate to the assessed posture; independent confirmation of the merchant identity, booking terms, and payment protections should precede any credential or payment submission.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about atlas-krasnodar.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
