Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

Autoblog.nl is a Dutch automotive news and community portal presenting vehicle news, reviews, videos, user-submitted car photographs, comments, and automotive classifieds; its apparent business model is ad-supported editorial publishing supplemented by advertising and partnership activity.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent editorial identity through automotive news, reviews, Formula 1 and electric-vehicle coverage, user-uploaded “spots,” community comments, videos, and classifieds, rather than the payment, investment, or credential-harvesting mechanics commonly associated with deceptive sites. External reputation checks found no malicious or suspicious detections, no phishing or impersonation indicators, and no confirmed adverse reputation signal. The combination of a long-established domain, an established global traffic footprint, and mature, content-rich site behavior supports the conclusion that Autoblog.nl is a legitimate established publication.

EVIDENCE

- The homepage identifies Autoblog.nl as an automotive news and community site, with article listings, reviews, videos, user uploads, comments, and classifieds.
- External reputation checks recorded 0 malicious results, 0 suspicious results, and no malicious safe-browsing finding for the domain.
- The domain was registered on 2004-10-14 and is approximately 21.84 years old; the listed registrar is team.blue nl B.V.
- The domain is within the global top one million by traffic, with a recorded rank of 46259.

Regulatory Verification Notes

Autoblog.nl presents an editorial and advertising-supported business model rather than a regulated financial service. No license or regulatory registration claim is disclosed in the supplied site content; this is a limited transparency note and does not indicate impersonation or deceptive conduct in the context of the stated publishing model. The site's identity is presented consistently, and no conflicting legal identities or adverse broker-related match were identified. Its established registration, valid transport encryption, and stable public-facing content provide affirmative support for operational legitimacy.

EVIDENCE

- The homepage describes editorial content, advertising, employment, submissions, and automotive marketplace activity rather than a licensed financial product.
- The domain is hosted on AS396982, Google Cloud Platform, Google LLC, United States.
- The site uses a valid DV TLS certificate issued by WR3, valid through 2026-09-24.
- The captured homepage returned HTTP 200 successfully and contained approximately 7,358 characters of substantive page text.

What to Verify Next

For institutional engagement involving advertising, classifieds, or content partnerships, the relevant counterparty and contractual terms should be confirmed through the site's established business channels. Any user-to-user vehicle transaction should be assessed independently using ordinary identity, payment, ownership, and documentation checks. Privacy, publishing, and user-submission terms should also be reviewed before material content or personal information is provided.

EVIDENCE

- The homepage exposes business-facing functions for advertising and vacancies alongside editorial and user-submission functions.
- The captured page contained no sensitive input form and no untrusted form destination.
- Behavioral testing identified no wallet connection, wallet-sensitive activity, clipboard hijacking, hidden form, or cloaking behavior.

Summary Verdict

Autoblog.nl has a high-trust posture and is assessed as a legitimate, established website with a coherent business purpose and no observed scam or impersonation contradictions. Normal interaction, including account login and standard site use, is appropriate.

Infrastructure Integrity

The site uses a resolved cloud-hosting configuration associated with Google Cloud Platform, with a single identified address and no separately identified CDN or WAF vendor in the supplied infrastructure facts. This is a conventional operational arrangement and provides a modest infrastructure-mitigation signal, but infrastructure alone is not proof of legitimacy.

Closing Assessment

Normal use is appropriate; any commercial or user-to-user transaction should retain standard payment, identity, and record-keeping controls.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about autoblog.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
