

Is avsecurity.be a scam? TrustSniffer's high-risk assessment: 0/100

avsecurity.be

Verdict

0

OUT OF 100

CRITICAL RISK

avsecurity.be shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-22 by automated analysis. Classification confidence 55%.

What this site appears to be

AVSecurity is a local Belgian security-systems vendor and installer offering certified alarm systems, cameras, detectors, and maintenance contracts; the site contains product/service descriptions, a contact/quote form, contact details and cookie consent information.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

The page as captured

<https://avsecurity.be/>

What avsecurity.be served when TrustSniffer captured it on 2026-08-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2015.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website presents AVSecurity as a Belgian local security-systems vendor and installer offering alarm systems, surveillance cameras, detectors, installation, and ongoing maintenance or assistance contracts for residential and business customers.

Scam/Impersonation Risk

No identity contradiction or on-page brand-impersonation indicator was identified, and the homepage content is consistent with an ordinary security-services business rather than a financial or cryptocurrency operation. However, the domain is subject to a confirmed blacklist finding, with six malicious detections recorded by external security assessment and a Fortinet threat detection. These signals create a material risk that the website, its infrastructure, or associated content may be unsafe despite the otherwise conventional presentation. The real-world operator remains unverified, so the site's business claims should not be treated as independently established.

EVIDENCE

- The domain was registered on 2014-10-06 and is approximately 11.88 years old.
- Historical records contain 79 snapshots spanning 2015–2026, covering 12 years of tracked activity.
- External reputation assessment recorded 6 malicious detections and a confirmed blacklist status; Fortinet was among the flagged security vendors.
- The homepage contains a contact and quote workflow but no login form, password collection, or hidden sensitive form.

Regulatory Verification Notes

The site describes commercial sale, installation, and maintenance services, but the available site content does not state a licensing authority, license number, or independently verifiable corporate registration. This is a regulatory and disclosure gap rather than, by itself, proof of fraud. The site's apparent operator identity is not independently verified, and the available material should therefore be treated as a business presentation rather than conclusive evidence of the legal entity responsible for the service. Transport security is present, but domain-validation TLS confirms control of the domain only and does not validate the operator's legal status.

EVIDENCE

- The business pages describe alarm systems, cameras, detectors, installation, and maintenance contracts without publishing a license authority or license number.
- The site's TLS certificate is issued by YR1, uses Domain Validation (DV), and is valid until 2026-10-30.
- The site uses WordPress with Elementor and CookieYes, and provides cookie-consent information on the homepage.

What to Verify Next

Before any operational engagement, an independent registry or sector-authority check should confirm the responsible Belgian legal entity and any authorization required for security-system installation or monitoring. Contact details should be validated through an independent offline or established business channel, and any quotation, payment request, software download, or support instruction should be checked against the independently confirmed entity. The contact form should not be used to submit sensitive personal, access-control, or security-system information until those checks are complete.

EVIDENCE

- The homepage provides a single contact or lead-capture form for quote requests.
- The available page analysis found no published login workflow or password-collection form.
- External reputation findings remain unresolved by the site's ordinary service descriptions and should be reviewed by the organization's endpoint or fraud-security team before engagement.

Summary Verdict

The overall posture is **critical trust risk** with a high likelihood of sensitive-interaction concerns. Although the website presents a coherent local-services proposition, the confirmed external threat and blacklist signals

outweigh its conventional content and established domain history. Legitimacy is therefore not established, and the site should not be treated as a trusted business endpoint.

Infrastructure Integrity

The site resolves directly to likely origin infrastructure rather than a protective CDN or WAF edge, with two origin candidates identified. Hosting is provided by Infomaniak Network SA in Switzerland on AS29222; this hosting arrangement is a neutral infrastructure fact and does not validate the site's legitimacy or offset the external reputation concerns.

EVIDENCE

- Served from AS29222, Infomaniak-AS – Infomaniak Network SA, CH.
- Hosting infrastructure is located in Switzerland.
- Infrastructure analysis identified 2 unique IPs, 0 CDN edge IPs, and 2 likely origin IPs.

Closing Assessment

Access should remain limited to non-sensitive observation while the responsible entity, regulatory standing, and contact channels are independently confirmed; credentials, confidential security information, payments, and other consequential interactions should be withheld pending that confirmation.

Written analysis generated 2026-08-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The page carried inline scripts written in a style TrustSniffer treats as suspicious.
Behaviour in a sandbox rule:BEHAV_SUSPICIOUS_INLINE_SCRIPTS
- The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
- A large share of what the page loaded came from other domains.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_MODERATE
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of avsecurity.be.

- The request stayed on avsecurity.be. It was not redirected to another domain. CLEAR
- DNS for this domain is served by infomaniak.com. NOTED
- The earliest public archive of this site is from 2015-08-18. CLEAR
- It is hosted on Infomaniak-AS, from a server in CH. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about avsecurity.be at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that

evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
