

Is **awanengineering.com** a scam? TrustSniffer's high-risk assessment:  
0/100

awanengineering.com

Verdict

0

OUT OF 100

CRITICAL RISK

awanengineering.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Awan Engineering Company — Islamabad-based systems integrator offering office automation, solar energy systems, UPS/backup solutions, CCTV and telecom equipment. Includes company description, recommended brands, services, address, phone and a contact form.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
  - Module-level completeness metadata is unavailable for this legacy report.

## The page as captured

<https://awanengineering.com/>

What awanengineering.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

## Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2018.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

## Full analysis

### Security Alert

Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Awan Engineering Company presents itself as an Islamabad-based systems integrator serving businesses across Pakistan, with offerings spanning office automation, Panasonic communications equipment, APC UPS and backup power, Dahua CCTV and access control, telecom equipment, and solar-energy design, installation, and maintenance.

### Scam/Impersonation Risk

The site's visible content is coherent with a conventional commercial engineering business: it provides service descriptions, named equipment brands, a stated Islamabad location, and a standard contact form, with no observed login form, credential-collection mechanism, wallet connection, or obvious brand-impersonation pattern. However, these benign page-level characteristics are outweighed by confirmed external threat detections and blacklist listings associated with the domain. The presence of malicious detections from multiple external reputation sources is a direct contradiction to the otherwise ordinary presentation; the domain should therefore be treated as unsuitable for sensitive interaction, credential submission, or financial activity until the

adverse findings are independently resolved. No conflicting legal identities were observed across the supplied site content, and no separate impersonation indicator was identified.

#### EVIDENCE

- The homepage presents Awan Engineering Company as a systems integrator with business services, named technology partners, an Islamabad head-office reference, and a contact form.
- External reputation evaluation recorded 11 malicious detections and 1 suspicious detection; one tier-one security vendor also flagged the domain.
- The domain was listed by external blacklist sources, while Google Safe Browsing returned no malicious result; the mixed result does not negate the confirmed blacklist and malicious-detection signals.
- Historical records show 62 archive snapshots spanning 2018–2026, with the site’s historical classification remaining within the same broad “other” category and no confirmed suspicious repurposing.

### Regulatory Verification Notes

The website describes a commercial systems-integration business rather than a regulated financial service. Its supplied content does not state a license, registration number, or regulatory authority, leaving the legal and authorization position unclear for any procurement, installation, or maintenance engagement. This is a disclosure gap requiring verification, not by itself proof of fraud. The available identity evidence is only probabilistic: the site links to one Facebook domain, but the real-world operator is not independently verified. A separate broker-reputation dataset produced no match, which provides limited contextual reassurance but is not a licensing or regulatory determination.

#### EVIDENCE

- The homepage and About content identify the business as Awan Engineering Company and describe commercial sales, installation, and support services.
- No license authority or license number is claimed in the supplied business-model information.
- The domain was registered in 2019 and is approximately 6.83 years old; the listed registrar is OnlineNIC, Inc.
- The site is served through AS13335, Cloudflare, Inc.; its TLS certificate is DV-validated, issued by WE1, and valid through 2026-10-25.

### What to Verify Next

Before any purchase, site visit, installation contract, or exchange of business information, the proposed counterparty should be confirmed through an independently sourced telephone number or offline business reference rather than relying solely on website content. Company registration, tax status, and any sector-specific authorization should be checked with the relevant Pakistani authority or procurement records. The adverse domain reputation findings should also be reconciled with the organization’s verified IT or hosting contacts before the domain is permitted in enterprise workflows.

## EVIDENCE

- The homepage provides a stated Islamabad location and a contact form but no sensitive submission form.
- The site links to Facebook as its only supplied social-media presence.
- Browser testing observed no login form, hidden form, wallet connection, password submission to an external destination, or cloaking behavior.
- The page was successfully rendered in two recorded runs with stable HTTP 200 responses.

## Summary Verdict

The website presents a credible-looking corporate profile, but the confirmed blacklist status and malicious external detections establish a **critical sensitive-interaction risk** that overrides the otherwise coherent business presentation. The organization's real-world identity remains likely rather than independently verified, so the site cannot presently be treated as a trustworthy basis for credentials, confidential information, or financial commitments.

## Infrastructure Integrity

Cloudflare provides the site's CDN and WAF protection, with observed edge infrastructure including AS13335 and AS16509; one potential origin candidate was also identified among the resolved addresses. This infrastructure is a mitigating technical control for routine exposure and traffic handling, but it does not validate the operator or offset the domain's adverse reputation signals.

## Closing Assessment

Sensitive interaction should be deferred until the counterparty, contact channels, business authorization, and domain reputation findings have been independently confirmed through trusted offline or authoritative sources.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

## What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

### 01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF\_WHOIS\_INCOMPLETE

### 02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct\_threat

- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT\_BLACKLIST\_CRITICAL

## Identity verification

|                                  |        |
|----------------------------------|--------|
| Status                           | LIKELY |
| Identity score                   | 73/100 |
| Identity verification confidence | 74%    |

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

## What TrustSniffer observed

First-party facts recorded during the assessment of [awanengineering.com](#).

- The request stayed on [awanengineering.com](#). It was not redirected to another domain. [CLEAR](#)
- Registration is published under OnlineNIC, Inc.. [CLEAR](#)
- DNS for this domain is served by [cloudflare.com](#), across 2 name servers. [NOTED](#)
- The registration is paid up to 2026-10-24. [NOTED](#)
- The earliest public archive of this site is from 2018-04-19. [CLEAR](#)
- It is hosted on CLOUDFLARENET, from a server in US. [NOTED](#)

## About this assessment

A trust score summarises the evidence TrustSniffer could collect about [awanengineering.com](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
