## Key findings

---

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

## Full analysis

---

### Overview

The website is the corporate site of AZOTTECH (A3OTTEX), presenting a B2B industrial business focused on mining-sector blasting services, industrial explosives and chemicals, specialized equipment, plant construction, surveying, and related engineering work.

### Scam/Impersonation Risk

No contradictions were observed. The site presents a coherent corporate and industrial-services identity, with no detected phishing indicators, login forms, hidden sensitive forms, brand-impersonation signals, or page-level red flags. External reputation checks found no malicious or suspicious detections, no confirmed blacklist result, and no reported abuse activity associated with the observed infrastructure. The available evidence therefore supports an apparently legitimate, low-risk presentation, while independently confirming the real-world operator remains outside the scope of the available evidence.

#### EVIDENCE

- Homepage: describes AZOTTECH's mining-sector blasting, industrial explosive supply, equipment, and engineering activities without deceptive or impersonation indicators.
- Homepage behavior: no login form, hidden form, wallet interaction, clipboard manipulation, cloaking, or suspicious inline script was detected.
- External reputation evidence: malicious detections, suspicious detections, and blacklist findings were all absent; abuse reporting was recorded as zero.
- Domain registration: registered through RU-CENTER-RU on 2009-06-15 and recorded as approximately 17.16 years old.

### Regulatory Verification Notes

The business model is commercially plausible for a corporate industrial-services provider, but the site's presentation should not be treated as independent proof of the operator's legal identity or regulatory standing. The reviewed pages provide company information, contact details, an office address, career links, and sections concerning the company and sustainability. They describe the supply of industrial explosives and chemicals, blasting operations, manufacture of emulsion plants and specialized mining equipment, and surveying supported by unmanned aircraft. No specific license authority or license number is claimed in the supplied site evidence; this is a regulatory-disclosure gap requiring confirmation appropriate to the proposed contract. A third-party

broker-reputation dataset produced no match, which is contextual reassurance rather than a licensing or legal determination.

#### EVIDENCE

- Archive provenance: 116 snapshots spanning 2013-05-22 through 2026-08-11, covering 14 tracked years, with no detected suspicious repurposing or semantic drift.
- Site pages: the Company, Sustainability, Careers, and Contacts areas provide corporate context, contact details, an office address, and recruitment information.
- Technical certificate: GlobalSign RSA OV SSL CA 2018 issued an OV certificate for LLC AZOTTECH, valid through 2026-10-12.
- Domain registration record: expiration is recorded as 2027-06-15.

#### What to Verify Next

Before a commercial engagement, the proposed counterparty should be matched against an independent corporate registry using the legal name and office details published on the site. For any contract involving explosives, chemicals, blasting, plant construction, or surveying, the relevant permits, operating authorizations, and responsible legal entity should be confirmed directly with the applicable regulator or contracting authority. Contact details should be validated through an independently sourced route, and any payment or credential transaction should use documented contractual protections, verified beneficiary details, and appropriate payment-recovery mechanisms.

#### EVIDENCE

- Company and Contacts pages: provide the identity and location details to use for independent counterparty matching.
- Services and equipment content: identifies activities for which applicable permits and authorizations should be confirmed before contracting.
- Careers and corporate pages: provide additional organizational context for comparison with independently obtained company records.

#### Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. No scam, phishing, impersonation, blacklist, or conflicting-identity indicators were observed, although the operator's real-world identity has not been independently verified.

#### Infrastructure Integrity

The site resolves through AS15640, operated by FPIC-AS - MTS PJSC, RU, with identified origin infrastructure rather than a detected third-party CDN or WAF layer. This is a conventional, attributable hosting arrangement and provides some infrastructure consistency, but hosting characteristics alone do not establish legitimacy.

## EVIDENCE

- Hosting infrastructure: served from AS15640, FPIC-AS - MTS PJSC, RU; observed server IP 81.23.169.18.
- Transport security: the site uses an OV TLS certificate issued by GlobalSign RSA OV SSL CA 2018.
- Service behavior: two monitored runs completed successfully with stable HTTP response behavior and no cloaking classification.

## Closing Assessment

Prospective engagement is reasonable within normal enterprise controls, with independent counterparty, authorization, contact-channel, and payment-protection checks completed before credential submission or financial commitment.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

## What the analysis found

No rule findings contributed to this verdict.

## Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 30/100     |
| Identity verification confidence | 50%        |

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

## What TrustSniffer observed

First-party facts recorded during the assessment of azotech.ru.

- The request stayed on azotech.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by 169.18, across 2 name servers. NOTED
- The registration is paid up to 2027-06-15. NOTED
- The earliest public archive of this site is from 2013-05-22. CLEAR
- It is hosted on FPIC-AS, from a server in RU. NOTED

## About this assessment

A trust score summarises the evidence TrustSniffer could collect about azottech.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
