

Is bdtender.com legit? TrustSniffer's high-trust assessment: 90/100

bdtender.com

Verdict

90

OUT OF 100

HIGH TRUST

bdtender.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-22 by automated analysis. Classification confidence 55%.

What this site appears to be

BDTender appears to be a Bangladesh-focused tender/ procurement portal listing a wide range of categories (construction, IT, medical, vehicles, supplies, consultancy, auctions). The page includes contact phone numbers, links to login/register and premium features, and extensive category navigation. No financial investment or crypto-related solicitations are present in the provided content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2003.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

BDTender is a Bangladesh-focused tender and procurement portal that presents government and private tender notices across construction, engineering, information technology, medical supplies, vehicles, consultancy, auctions, and related procurement categories. Its apparent business model combines tender publication and search functions with premium accounts, paid listings, advertising, and featured placements.

Scam/Impersonation Risk

No contradictions were observed across the reviewed content and technical behavior: there was no detected impersonation, phishing pattern, malicious classification, blacklist hit, or government-search warning. The homepage presents a coherent procurement-portal purpose, with extensive category navigation and standard login, registration, and search functions rather than investment, cryptocurrency, or other high-risk financial solicitation. One external security classification was suspicious, but it was unconfirmed and not accompanied by a malicious result; behavioral review also identified some non-specific external network activity, while finding no

cloaking, hidden forms, externally submitted password forms, or wallet-draining behavior. These signals support a low scam/impersonation concern, while not independently proving the operator's identity.

EVIDENCE

- The homepage identifies the service as a tender notice portal and provides procurement categories without the red-flag indicators recorded in the page review.
- The homepage contains login, registration, and search forms; the behavioral review found no hidden forms or externally submitted password forms.
- External security checks recorded 0 malicious results, 1 suspicious result, a false malicious web-search status, and no external blacklist hit.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate commercial procurement portal, but the real-world operator is not independently verified. The reviewed site content does not claim a license or display a registration number; for this type of marketplace, that is a transparency and applicability question rather than evidence of a scam. The site's long registration continuity, sustained historical presence, known registrar, valid transport encryption, and substantial page content provide converging establishment signals. The certificate is domain-validated rather than organization-validated, so it confirms encrypted transport but does not establish the legal entity behind the service.

EVIDENCE

- Domain registration record: registered 2003-01-02T06:08:47Z, age 23.65 years, through NAMECHEAP INC, with expiry 2027-01-02T06:08:47Z.
- Historical record: first seen 2003-02-07T15:32:36Z, last seen 2026-02-10T17:26:28Z, spanning 24 years tracked.
- Hosting record identifies AS30148 and SUCURI-SEC - Sucuri, US.
- TLS certificate: Starfield TLS Intermediate CA DV - R1v1, validation level DV, valid to 2026-10-12T14:01:32+00:00.

What to Verify Next

Before credential or payment interactions, the prospective counterparty should independently confirm the legal operator and any procurement-related authorization that may apply through the relevant official registry. The published commercial terms, premium-account conditions, refund or cancellation arrangements, and payment-protection options should be reviewed, and contact channels should be confirmed through an independent route rather than relying solely on the website.

EVIDENCE

- The homepage exposes login, registration, premium-account, pricing, and contact functions that warrant review before account or payment use.
- The reviewed page identifies a marketplace-style business model but does not provide a confirmed legal-entity or licensing signal in the supplied evidence.
- The site offers tender publication and search services, making verification of the specific tender issuer and payment recipient appropriate for each transaction.

Summary Verdict

Available evidence supports a high-trust, low-risk posture with no observed scam or impersonation contradictions. The website appears established and legitimate in its presented function, although the operator's real-world identity remains unverified.

Infrastructure Integrity

The site is protected by Sucuri CDN/WAF infrastructure, and the observed service resolved to a CDN edge rather than a directly exposed origin. This reduces direct exposure of the origin environment and is a meaningful mitigating control, but protective infrastructure alone is not proof of organizational legitimacy.

Closing Assessment

Ordinary independent checks of the counterparty, applicable transaction terms, and payment protections should be completed before credentials or funds are committed.

Written analysis generated 2026-08-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bdtender.com.

- The request stayed on bdtender.com. It was not redirected to another domain. CLEAR
- Registration is published under NAMECHEAP INC. CLEAR
- DNS for this domain is served by uialbd.com, across 2 name servers. NOTED
- The registration is paid up to 2027-01-02. NOTED

- The earliest public archive of this site is from 2003-02-07. CLEAR
- It is hosted on SUCURI-SEC, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bdtender.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
