Transforming

What beingagilist.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Being Agilist is a corporate technology-agency website presenting custom software development, AI integrations, Web3 and blockchain services, cloud solutions, product design, project consultancy, and training. Its apparent business model is B2B lead generation for paid technology projects, consultancy, workshops, and related client engagements.

Scam/Impersonation Risk

The principal risk is not the service description itself, which presents a conventional agency model and contains no obvious on-page fraud indicators, but a **confirmed external blacklist signal** associated with the domain. Multiple external detections classified the site as malicious or suspicious, including a Tier-1 detection by Sophos, and the domain is recorded by blacklist sources. This evidence is materially inconsistent with treating the site as suitable for login, credential submission, financial activity, or other sensitive interaction. No separate brand-impersonation or conflicting legal-identity finding was identified, but the blacklist evidence alone establishes a severe security concern.

EVIDENCE

- The homepage presents Being Agilist as a technology agency and contains no detected login form, hidden form, wallet-drainer behavior, or password-external form.
- External reputation telemetry records 11 malicious detections and 1 suspicious detection from 12 evaluated results; Sophos is among the flagged vendors.
- The domain is recorded as blacklisted by external blacklist sources, while Google Safe Browsing reports no malicious classification.
- Domain registration telemetry records creation on 2020-01-02T12:48:21Z through GoDaddy.com, LLC, with an age of 6.63 years.

Regulatory Verification Notes

The site's stated B2B technology-services model is not, by itself, a regulated financial activity. Nevertheless, the available identity and disclosure material does not establish an independently verified operating entity or regulatory status, and no license claim or license number is presented in the supplied site content. The homepage includes an office address, telephone numbers, social links, and an inquiry form, but these are self-published contact claims rather than independent proof of corporate identity. The confirmed blacklist signal should therefore be treated as the decisive trust concern, while regulatory and entity checks remain unresolved verification matters.

EVIDENCE

- The homepage identifies "Being Agilist," describes custom development, AI, Web3, cloud, consultancy, and training services, and provides an office address and contact details.
- The site contains one contact-inquiry form and no sensitive form or login form.
- Hosting telemetry records AS209242 with hosting organization CLOUDFLARESPECTRUM - Cloudflare London, LLC, US.
- The site's TLS certificate is issued by WE1 at DV validation level and is valid to 2026-11-06T02:36:54+00:00.

What to Verify Next

Before any engagement, an enterprise should independently confirm the legal entity behind the business, its registration and operating jurisdiction, and whether any proposed service falls within a regulated activity requiring authorization. Contact channels and the stated office should be validated through an independent route rather than relying solely on the website. Any contract, payment request, software download, or request for credentials should undergo normal procurement, sanctions, malware, and payment-protection controls; sensitive interaction should remain suspended unless the blacklist finding is satisfactorily resolved by the responsible security team.

EVIDENCE

- The homepage states that the business has helped companies for “over 10 years,” while the independently recorded domain creation date is 2020-01-02.
- Historical web coverage is recorded from 2021-11-27T15:49:16Z through 2025-07-18T21:00:34Z and is described as sparse.
- The site links to Twitter, Facebook, Pinterest, Instagram, LinkedIn, and Upwork; these channels provide potential independent routes for entity and contact validation.
- The homepage’s stated business model is client projects, consultancy, training, and workshops rather than direct financial-product intermediation.

Summary Verdict

The website has a conventional corporate presentation, but its overall trust posture is **critical and unsuitable for sensitive interaction**. The external security evidence creates a material contradiction that outweighs the site’s professional appearance and ordinary agency content. The operator’s real-world identity remains only likely rather than independently verified.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, with observed traffic reaching a CDN edge rather than a directly exposed origin; this is a mitigating infrastructure control, not evidence that the website or its operator is legitimate. The observed edge address is 160.153.0.159, and the origin server was not observable in this analysis.

Closing Assessment

The appropriate enterprise disposition is to block or quarantine sensitive interaction with the site pending independent security review and documented resolution of the external detections. Any unavoidable business engagement should proceed only through approved third-party controls, independently validated contacts, and protected payment and contracting processes.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The page sent data to a destination TrustSniffer does not recognise.
Behaviour in a sandbox rule:BEHAV_NONWHITELISTED_POSTS
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	40%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of beingagilist.com.

- The request stayed on beingagilist.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under GoDaddy.com, LLC. [CLEAR](#)
- DNS for this domain is served by domaincontrol.com, across 2 name servers. [NOTED](#)
- The registration is paid up to 2027-01-02. [NOTED](#)
- The earliest public archive of this site is from 2021-11-27. [CLEAR](#)
- It is hosted on CLOUDFLARESPECTRUM, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about beingagilist.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
