

Is bet36536529.com a scam? TrustSniffer's high-risk assessment: 0/100

bet36536529.com

Verdict

0

OUT OF 100

CRITICAL RISK

bet36536529.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Short landing page for a gambling/casino brand (K8) providing multiple mirror domains and an app download prompt. Content encourages use of alternate access lines and warns against using an anti-fraud app on the same device; lacks verifiable regulation or contact information.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

What bet36536529.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2021.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website is a short K8-branded gambling and casino landing page that directs visitors to alternate access lines and an application download, presenting itself as a wagering portal or affiliate channel rather than as a transparent, independently identifiable business.

Scam/Impersonation Risk

The site presents multiple high-risk contradictions. External security intelligence recorded a confirmed blacklist hit, including ten malicious detections and one suspicious detection, with Fortinet, Kaspersky, and Sophos among the reporting vendors. The homepage also directs visitors across several alternate domains and an app download while advising that the “国家反诈中心” anti-fraud application should not be used on the same device. That instruction is an **anti-fraud-evasion signal**, and the deposit-oriented gambling model, opaque value flow, and unverifiable contact information materially increase the risk associated with financial interaction. The evidence does not establish brand impersonation or a phishing page specifically, but the confirmed blacklist status independently supports a critical sensitive-interaction warning.

EVIDENCE

- Homepage: displays the K8 gambling brand, multiple alternate access lines, an app-download prompt, and an instruction not to use the national anti-fraud application on the same device.
- External reputation telemetry: 10 malicious detections, 1 suspicious detection, and confirmed blacklist status from two external sources; Fortinet, Kaspersky, and Sophos were among the flagged vendors.
- Registration record: created 2024-11-08 and recorded as approximately 1.78 years old.
- Archive telemetry: 80 snapshots spanning 2021-11-26 through 2026-02-22, with 6 years tracked.

Regulatory Verification Notes

The captured landing page does not state a licensing authority, license number, corporate registration, or verifiable operating address. Its limited content provides no substantive legal, dispute-resolution, responsible-gambling, or consumer-protection disclosure. Identity verification therefore remains unverified, and the apparent K8 branding should not be treated as proof of connection to a licensed operator. The available third-party broker context contains no matching result; this is contextual only and does not establish licensing or legality.

EVIDENCE

- Homepage: contains a short gambling-oriented presentation but no verifiable regulatory or corporate disclosure.
- Hosting telemetry: served from AS13335, Cloudflare, Inc., United States.
- Transport security telemetry: TLS certificate issued by WE1 at DV validation level, valid to 2026-11-10.
- Registration telemetry: registrar recorded as Gname.com Pte. Ltd.; registrant and organization fields are privacy-redacted.

What to Verify Next

Before any interaction, an independent check should identify the legal operator behind the K8 service and confirm any claimed gambling authorization directly with the relevant regulator's public registry. The application and alternate access channels should not be used unless the operator, jurisdiction, licensing status, withdrawal terms, and dispute process have been independently validated. Payment providers should also confirm that any transaction route is subject to appropriate chargeback, fraud-monitoring, and customer-protection controls.

EVIDENCE

- Regulatory verification: no license authority or license number is presented on the captured page for independent comparison.
- Identity verification: the available evidence does not independently connect the site to a verified real-world operator.
- Contact verification: the page-level assessment records no verifiable business contact information or address.

Summary Verdict

The overall posture is **critical risk for sensitive interaction**. The site's identity and operating legitimacy are not independently verified, while converging security and content signals support treating it as unsuitable for

credentials, account access, deposits, or other financial activity.

Infrastructure Integrity

Cloudflare CDN/WAF infrastructure protects the observed service, which is a mitigating technical control but not evidence of legitimacy. All observed addresses were CDN edge addresses, and no origin candidate was identified during the analysis; this limits independent assessment of the underlying hosting environment and may allow rapid content changes behind the edge.

Closing Assessment

The proportionate enterprise action is to block sensitive interaction and require documented operator, regulatory, and payment-channel validation before any future engagement.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

- 01 Governance Risk

 - The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
 - Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE
- 02 Sensitive Interaction Risk

 - The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
 - An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%
No on-site identity signals detected	

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bet36536529.com.

- The request stayed on bet36536529.com. It was not redirected to another domain. CLEAR
- Registration is published under Gname.com Pte. Ltd.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-11-08. NOTED
- The earliest public archive of this site is from 2021-11-26. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bet36536529.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
