Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1998.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Betha Sistemas is a corporate website for municipal and public-sector management technology, presenting software solutions, training, partner and reseller programs, careers, client support, and corporate contact channels. Its apparent business model is enterprise software licensing and related services for public authorities and organizations.

Scam/Impersonation Risk

No contradictions were observed. The site's content is consistent with a professional corporate software vendor and contains no detected phishing, brand-impersonation, malicious-download, cryptocurrency, or deceptive-interaction indicators. External reputation checks found no malicious or suspicious detections, and the site's historical record supports continuity rather than recent repurposing.

EVIDENCE

- The homepage identifies Betha Sistemas as a provider of software for municipal and public-sector management and presents corporate, careers, training, partner, and client-support pathways.
- The domain was registered on 1997-07-25 and is approximately 29.07 years old.
- Historical records contain 533 snapshots spanning 1998–2026, with 29 years tracked.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, no search-engine malware warning, and no external blacklist hit.

Regulatory Verification Notes

The available evidence supports an established, apparently legitimate corporate website, but does not independently verify the real-world operator identity. A registration record names BETHA SISTEMAS LTDA.; that record is an identity signal rather than proof that the website is controlled by that entity. The site presents software and services for public-sector management rather than a claimed regulated financial service, and no regulatory license or license number is presented in the supplied content. This is a disclosure and verification point, not evidence of scam activity. The absence of a broker-dataset match is only contextual reputational information and is not a licensing determination.

EVIDENCE

- The registration record lists BETHA SISTEMAS LTDA. as the owner and shows an expiry date of 2027-07-25.
- The site is served through AS16276, OVH - OVH SAS, FR.
- The transport certificate is issued by YR1, uses DV validation, and is valid until 2026-10-04 23:18:52 UTC.
- The homepage, contact, partner, career, training, and client-support sections describe a corporate software and services model without presenting a regulated-finance license claim.

What to Verify Next

Before a procurement, credential, or payment interaction, the prospective counterparty should independently match the contracting entity and authorized representatives against the relevant corporate registry and confirm that the official contact route is controlled by that entity. For any service represented as regulated, the applicable regulator and license number should be checked directly in the regulator's registry. Contract terms, service commitments, cancellation or return provisions, and payment protections should also be reviewed before funds or sensitive credentials are submitted.

EVIDENCE

- The About and corporate-information areas provide the stated business context for independent entity matching.
- The contact and client-support pages provide channels that can be compared with independently sourced corporate contact details.
- The product and service pages define the scope of the proposed software, training, support, or partner engagement.
- The client portal and account-related pathways should be reached only through the independently confirmed official domain and contact channels.

Summary Verdict

The website has a high-trust, low-risk posture and is evidence-consistent with an established corporate site. Its legitimacy appears well supported by converging content, historical continuity, technical stability, and clean reputation signals, while operator identity remains independently unverified.

Infrastructure Integrity

The site is protected by an AWS CDN/WAF, with the observed edge address hosted on AS14618 (Amazon-AES, Amazon.com, Inc., US); no origin candidate was identified in the infrastructure observation. This layered delivery architecture is a mitigating security signal because it reduces direct exposure of the application environment, but it does not independently establish corporate ownership.

Closing Assessment

Ordinary business engagement is proportionate, subject to independent confirmation of the contracting entity, applicable terms, and payment protections before credential or payment interactions.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of betha.com.br.

- The request stayed on betha.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by awsdns-31.com, across 4 name servers. NOTED
- The registration is paid up to 2027-07-25. NOTED
- The earliest public archive of this site is from 1998-01-25. CLEAR
- It is hosted on OVH, from a server in CA. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about betha.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
