

Is betonpas.com safe? TrustSniffer's low-trust assessment: 40/100

betonpas.com

Verdict

40

OUT OF 100

LOW TRUST

betonpas.com is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Persian-language website for Beton Pas chemical company. Provides product catalog, production lines, quality certifications, contact numbers and address in Tehran. Appears to be a legitimate manufacturer site focused on construction chemicals and industrial products.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What betonpas.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2002.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Beton Pas is a Persian-language corporate product-catalog website for a construction-chemical manufacturer, presenting concrete additives, waterproofing materials, adhesives, coatings, sealants, flooring systems, grouts, paints, and related industrial products for sales, distribution, representative networks, and project-based manufacturing.

Scam/Impersonation Risk

The site presents a coherent corporate manufacturer profile and the observed homepage contains no login form, sensitive submission form, wallet connection, suspicious script activity, or detected brand-impersonation pattern. However, this benign page presentation is materially contradicted by external threat intelligence: the domain has a confirmed blacklist hit, with two malicious and two suspicious detections recorded. This creates a significant risk for credential, account, or financial interaction despite the absence of an on-page phishing mechanism. Historical records indicate activity from 2002 through 2026, while the registration record dates to 2008; this historical discrepancy does not establish an impersonation, but it prevents the archive record from independently confirming the current operator's identity.

EVIDENCE

- The homepage is classified as a corporate product catalog and contains no login or sensitive form.
- Behavioral inspection recorded two successful runs, zero external network activity, zero wallet or credential-drainer activity, and no cloaking classification.
- External reputation checks recorded a confirmed blacklist hit, 2 malicious detections, and 2 suspicious detections.
- Domain registration is recorded as 2008-06-30, with an age of 18.15 years; archive records contain 163 snapshots spanning 2002–2026, tracked across 25 years.

Regulatory Verification Notes

The history, products, certifications, representative-network, and contact pages provide substantive commercial information, including telephone contacts and a Tehran address. The website does not present a license authority or license number in the supplied evidence, so regulatory status remains a disclosure and verification matter rather than proof of unlawful conduct. Independent identity verification is not established; the registration record identifies 1API GmbH as registrar and records the registrant and organization as private. The site's corporate content is internally coherent, but its apparent legitimacy cannot override the confirmed external reputation contradiction.

EVIDENCE

- The homepage and product pages identify a construction-chemical manufacturer and present quality certifications and production information.
- The history, representative, and contact pages provide corporate background, distribution information, telephone contacts, and a Tehran address.
- The registration record lists 1API GmbH as registrar and shows the registrant and organization as "REDACTED FOR PRIVACY."
- The site's transport encryption uses a DV certificate issued by YR2, valid until 2026-11-09.

What to Verify Next

Before any sensitive interaction, the claimed company name, Tehran operating address, certifications, and representative relationships should be confirmed through independent corporate and certification registries or an offline business contact. Any proposed commercial transaction should use payment protections appropriate to an unverified counterparty, and account credentials should not be reused from other services. Security teams should independently review the blacklist detections and establish whether the current domain is an authorized business asset before permitting credentialed or financial access.

EVIDENCE

- The contact and history pages are the appropriate sources for confirming the entity's stated business identity and physical presence.
- The certification references on the corporate and product pages should be matched against the issuing organizations.
- The representative and cooperation pages should be validated through independently obtained contact details.
- The site's business model is product sales, distribution, and contract manufacturing rather than an on-page account or financial service.

Summary Verdict

The overall posture is low trust, with elevated risk concentrated on sensitive interactions. The website appears commercially coherent at the content level, but the confirmed external reputation contradiction and unresolved operator identity make that appearance insufficient to support normal credentialed or financial engagement.

Infrastructure Integrity

The site is directly hosted without a detected CDN or WAF layer, and the infrastructure exposes a likely origin address rather than a protective edge network. This provides limited infrastructure-based mitigation and should be treated only as a technical observation, not as evidence of maliciousness or legitimacy.

Closing Assessment

A prospective counterparty should limit interaction to non-sensitive review until the operator, certifications, and current domain authorization have been independently confirmed; credentialed, payment, or other high-impact actions should remain restricted pending those checks.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE

- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of betonpas.com.

- The request stayed on betonpas.com. It was not redirected to another domain. CLEAR
- Registration is published under 1API GmbH. CLEAR
- DNS for this domain is served by hostiran.net, across 2 name servers. NOTED
- The registration is paid up to 2030-06-30. CLEAR
- The earliest public archive of this site is from 2002-09-24. CLEAR
- It is hosted on Hostiran-Network, from a server in IR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about betonpas.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
