Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

BeWell Medical Clinic is a North Vancouver healthcare website presenting family physicians, pain management, trigger-point injections, K-Laser therapy, IUD insertion, telehealth, minor procedures, patient information, pricing, staff details, and online appointment booking for a local medical practice.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, brand impersonation, malicious reputation, or conflicting legal identity. The site's healthcare content, local contact and booking functionality, staff and patient-facing information are consistent with the stated clinic purpose. Behavioral review recorded two suspicious inline scripts and post-interaction DOM changes, but found no hidden forms, externally submitted password forms, wallet activity, clipboard manipulation, or cloaking; these isolated technical observations are therefore not corroborated as a credential-harvesting or impersonation pattern.

EVIDENCE

- The homepage identifies the business as BeWell Medical Clinic and provides appointment booking, clinical services, patient information, and contact access.
- The homepage and contact content publish a North Vancouver address, telephone and fax numbers, and a clinic-domain email address.
- Behavioral inspection recorded 2 suspicious inline scripts and a maximum post-interaction DOM difference of 2842, while recording 0 hidden forms, 0 external password forms, 0 wallet-connect runs, and 0 clipboard-write events.
- Available external reputation checks recorded 0 malicious detections, 0 suspicious detections, 0 abuse reports, and no impersonation or phishing match.

Regulatory Verification Notes

The About, Team, Contact, patient-information, insurance-pricing, and service pages provide substantive operational and clinical information, but the available site content does not present a license claim, licensing authority, or license number. This is a regulatory-disclosure gap requiring ordinary verification for a healthcare provider, not evidence of a scam. The operator's real-world identity remains likely rather than independently verified; the presence of Facebook and LinkedIn links provides supporting continuity but does not establish legal identity. Domain registration is through Tucows.com Co., and the site uses a valid DV TLS certificate issued by YR1. Available third-party reputational context contains no broker match, while reputation coverage is partial.

EVIDENCE

- Domain registration record: created 2019-01-08; age 7.62 years; expiry 2027-01-08.
- Web-archive record: 76 snapshots spanning 2019–2026, with 8 years tracked.
- Hosting record: served on AS210250, WPX - K Media Tech Ltd., BG.
- Transport security: TLS certificate issued by YR1, validation level DV, valid to 2026-10-06T07:51:31+00:00.

What to Verify Next

Before credential or payment interactions, an independent check should confirm that the clinic, named practitioners, and applicable services correspond to the relevant provincial healthcare registries. The booking and payment terms should also be reviewed for cancellation, insurance, refund, and patient-data conditions, and contact channels should be confirmed through an independently sourced clinic listing or offline route.

EVIDENCE

- The About and Team pages provide the identity and staff information to compare with an applicable professional registry.
- The Medical Services and Patient Information pages describe the services and patient process requiring regulatory alignment.
- The Insurance Pricing and booking pages provide the commercial and appointment terms to review before payment.
- The Contact page supplies the operational details needed for an independent contact-channel confirmation.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate healthcare website and supports a strongly positive, low-risk trust posture. The classification is high confidence in site-level trust but does not independently prove the real-world operator's identity.

Infrastructure Integrity

The site resolves to hosting associated with WPX - K Media Tech Ltd., AS210250, with infrastructure located in Bulgaria; no CDN or WAF provider was identified, and two likely origin addresses were observed. This is a direct-hosting posture rather than a contradiction, while the site's valid TLS transport provides a baseline protective control.

Closing Assessment

Normal browsing and appointment research are proportionate, with independent clinic-identity, practitioner, service-term, and payment-protection checks completed before submitting credentials or making payments.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bewellmedical.ca.

- The request stayed on bewellmedical.ca. It was not redirected to another domain. [CLEAR](#)

- Registration is published under Tucows.com Co.. CLEAR
- DNS for this domain is served by wpx.net, across 3 name servers. NOTED
- The registration is paid up to 2027-01-08. NOTED
- The earliest public archive of this site is from 2019-08-20. CLEAR
- It is hosted on WPX, from a server in BG. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bewellmedical.ca at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
