## Key findings

---

- Automated classification: Not Scam.
- Domain age: 1 to 3 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

## Full analysis

---

### Overview

The website is Vector AI Tech, a Russian-language B2B software platform presenting Boring ML, a machine-learning analytics service that uses mobile-operator and other data to support business prediction, anti-fraud, marketing, and credit-related decisions.

### Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent software business model, including customer-response prediction, call-timing prediction, anti-fraud prediction, and loan- or credit-repayment prediction, with individualized pricing rather than deposits, investment returns, or other financial inducements. The site contains no login form, phishing indicators, brand-impersonation signal, or malicious external reputation finding.

- Homepage content identifies Boring ML as a business analytics platform and describes specific machine-learning use cases.
- The homepage offers a contact form for individualized software pricing rather than requesting deposits or promising returns.
- External security checks recorded zero malicious and zero suspicious detections, with no phishing finding.

### Regulatory Verification Notes

The site provides a concrete corporate identity, address, registration information, privacy-processing consent, and a published business contact channel. It does not claim a financial-services license or regulatory authorization; this is a transparency point to confirm against the applicable software, data-protection, and sector-specific requirements if the platform is used for credit or anti-fraud decisioning. The available evidence supports a legitimate software entity, while licensing status remains outside the site's stated disclosures.

- Homepage identifies ООО «BEKTOP» with INN 7805816130, OGRN 1247800060342, and OKVED 62.01.
- Homepage provides a Saint Petersburg business address and links to the personal-data processing policy.
- Domain registration was recorded through REGRU-RU on 2024-08-27; domain age was 1.93 years.
- Hosted on AS57724 (DDOS-GUARD - DDOS-GUARD LTD, RU); TLS certificate issued by YR1 with DV validation, valid to 2026-10-18 12:41 UTC.

What to Verify Next

For procurement or regulated deployments, confirm the stated corporate registration and assess whether the intended use of mobile-operator data and automated credit or anti-fraud predictions requires sector-specific approvals, contractual safeguards, or data-processing documentation.

- The homepage supplies the corporate registration identifiers for independent registry confirmation.
- The documentation and software-lifecycle pages describe the platform’s operational scope and should be reviewed before deployment.
- The privacy-policy link provides the relevant starting point for data-processing review.

Summary Verdict

The website presents a legitimate, established B2B software operation with a coherent purpose, identifiable corporate presentation, clean external reputation, and no observed impersonation or fraud contradictions. The overall trust posture is high, and normal interaction and standard use are appropriate.

Infrastructure Integrity

The site resolves to a single apparent origin address and is hosted by DDOS-GUARD on AS57724, without a detected CDN or WAF layer. This provides identifiable hosting infrastructure but limited edge-layer protection, a technical consideration rather than an indication of illegitimacy.

Closing Assessment

Standard business engagement is appropriate, with ordinary procurement, data-protection, and deployment checks applied according to the intended use.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 30/100     |
| Identity verification confidence | 50%        |

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bigmethods.ru.

- The request stayed on bigmethods.ru. It was not redirected to another domain. CLEAR
- Registration is published under REGRU-RU. CLEAR
- DNS for this domain is served by ru., across 2 name servers. NOTED
- The registration is paid up to 2026-08-27. NOTED

- It is hosted on DDOS-GUARD, from a server in RU. NOTED

### About this assessment

A trust score summarises the evidence TrustSniffer could collect about bigmethods.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
