Key findings

- Automated classification: Not Scam.
- Public web-archive history exists since 2013.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website operates as a German online marketplace for bicycles, e-bikes, and accessories, enabling visitors to compare offers from independent specialist dealers and use conventional fulfilment options such as shipping and click-and-collect, alongside leasing and instalment-payment services.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, malicious reputation findings, or deceptive investment propositions were observed. The long-established domain and substantial, continuous archival record materially support provenance, while the homepage presents a coherent retail-marketplace identity rather than an opportunistic or recently repurposed operation.

- The domain provenance record indicates registration in 2013 (~13.2 years old).
- The web archive contains 519 snapshots spanning 2013–2023 (11 years tracked), with no suspicious repurposing or semantic drift identified.
- The homepage contained no hidden forms, external password forms, cloaking, suspicious inline scripts, wallet-draining behaviour, or clipboard hijacking.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no search-browser safety hit or external blacklist finding.

Regulatory Verification Notes

The homepage provides a named business identity, customer-service access, dealer-network information, and policy material consistent with an established commercial marketplace. No financial-services licence is claimed, and the available evidence does not establish that the marketplace itself is acting as a regulated lender or broker; financing-related services appear within an ordinary retail context. The absence of a match in the supplied broker-reputation dataset is therefore neutral and does not constitute an adverse regulatory finding.

- The homepage identifies BikeExchange Deutschland and advertises more than 10,000 bicycles from over 300 specialist dealers.
- The homepage publishes a German ordering hotline and provides account, basket, help, dealer-finder, and policy-oriented navigation.
- The site is served from AS16509 (AMAZON-02 — Amazon.com, Inc., US).
- The site's transport encryption uses a YR1-issued domain-validated TLS certificate, valid to 2026-09-25.

What to Verify Next

For materially significant purchases, the prospective buyer should confirm the identity and contractual role of the individual dealer, review the applicable return, warranty, delivery, and payment terms, and ensure that any financing or leasing agreement identifies its actual provider. Official customer-service channels should be confirmed independently before resolving order or payment disputes.

- The homepage describes independent specialist dealers as the parties listing and fulfilling marketplace offers.
- The homepage presents both direct delivery and collection-based fulfilment, making dealer-specific logistics relevant to each transaction.
- The observed form was limited to newsletter registration and had no sensitive or untrusted submission destination.
- Interactive testing completed successfully without hidden-form behaviour, credential redirection, or browser-console errors.

Summary Verdict

This is a legitimate, established, and trustworthy commercial website with strong convergence between its marketplace identity, historical continuity, clean threat reputation, and conventional transactional design. No contradictory evidence undermines normal use, and account login and standard marketplace transactions are appropriate.

Infrastructure Integrity

The site uses a CDN/WAF configuration on Amazon-operated network infrastructure, with the observed address functioning as an edge endpoint rather than a directly exposed origin. This reduces origin exposure and provides a meaningful operational safeguard, although protective infrastructure is supporting evidence rather than independent proof of legitimacy.

Closing Assessment

Prospective customers may interact normally, while applying standard e-commerce diligence to dealer terms, payment arrangements, and purchase records.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of bikeexchange.de.

- The request stayed on bikeexchange.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by dnsimple-edge.com, across 4 name servers. NOTED
- The earliest public archive of this site is from 2013-05-02. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about bikeexchange.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
